Alluvial Mining, Middle Island— <i>continued.</i>		History of Cyanide Process— <i>continued.</i>	
Otago District— <i>continued.</i>		The Plant— <i>continued.</i>	
Preservation Inlet	117, 118	Plant for treating Precipitate	165
Wilson's River	117	Assay Plant	165
Sealers' Creek	117	The Lixiviation of the Ore	165-167
McNamara's Creek	118	Wash-water	165
Coal Island	118	Treatment by Caustic Alkali	165
Crayfish Island	118	The Cyanide Solution	166
Dredging	118-121	The Weak Solution	166
Otago District	118-120	Agitation of the Ore and Solution	166
Sandhills Company	120	Final Wash-water	166
Ophir	120	Sampling the Tailings and the Ore	166
Waipori	120	Discharging the Tailings	166
West Coast	120, 121	Precipitation of the Gold	166, 167
Coal-mining	121-125	Treatment of the Auriferous Precipitate	167
Northern Coalfields	121, 122	The Chemistry of the Process	167-171
Southern Coalfields	122-125	Solution of the Gold	167, 168
Westport District	122-124	Solubility of other Metals and Minerals	168
Westport Coal Company	122, 123	Treatment of Pyritic Ore previous to Lixivia-	
Cardiff Coal Company	123	tion with Cyanide	168
Sidings	124	Direct Treatment of Pyritic Ores by Cyanide of	
Bins	124	Potassium	168, 169
Incline	124	Precipitation of the Gold	169, 170
Otago District	124, 125	The Molloy Precipitating Process	170
Kaitangata Company	124, 125	Decomposition of the Cyanide	170
Castle Hill Company	125	Operations in the Laboratory	171
Mining Machinery	125-151	Genesis of Ore-deposits	171-221
The Mudie Ore-crusher and Gold-saver	125, 126	Part I. General Facts and Theories	173-192
The Mercury Mining Company's Cyanide Mill	126, 127	1. Systems of Classification employed hitherto	173, 174
The McCully Rock- and Ore-crusher	127, 128	2. Standpoint and View of the Present Paper	174, 175
New Chlorination Process	128, 129	3. The Xenogenites in General	175, 176
The Rio Tinto Rock-drill	129	4. The Subterranean Water-circulation	176, 177
Electric Rock-drills	130-132	(a.) The Vadose Underground Circulation	177-179
Austin's Patent Amalgamator	132	The Filling of the Open Spaces formed	
Patents applied for in the Colony (Specifica-		by the Vadose Circulation	178, 179
tions)	132-147	(b.) The Deep Underground Circulation	179-184
Improvements in or connected with Crushing-		The Ascending Waters encountered in	
or Grinding-mills, more especially intended		Mines	180
for grinding or reducing Ores containing Pre-		Related Phenomena near the Surface	181-183
cious Metals, and for separating Metals there-		Mineral Springs at the Surface	183, 184
from by Amalgamation. (By Emma Matilda		Waters encountered in Mines	184
Skell)	132, 133	Water in Ore-bearing Fissures	184
An Improved Concentrator and Classifier. (A. C.		Some Bohemian Thermal Springs	184
Holroyd and others)	134, 135	Weak and Strong Mineral Springs	184
An Improved Concentrator, usable preferably as		Analyses of some Ascending Waters	185-187
an Amalgamator and Concentrator. (James		5. Origin of Ore-deposits in the Deep Region	187-189
Channon)	135-137	Manner of Filling of Open Spaces in Gene-	
Improvements in the Chlorination of Pulverised		ral	189-192
Ores containing Gold and Silver, and in Ap-		Part II. Examples of Classes of Deposits	192-221
paratus therefor. (J. W. Sutton)	137, 138	1. Ore-deposits in Spaces of Dissection	192-194
Improvements in the Extraction of Gold and		(a.) Ore-veins in Stratified Rocks	194, 195
Silver from Ores. (C. M. Pielsticker)	138, 139	Andreasburg	195
Improvements in recovering Gold and other		(b.) Ore-veins in the Neighbourhood of	
Precious Metals from their Ores. (Carl		Eruptive Masses	195, 196
Moldenhauer)	140, 141	The Erzgebirge	195
Improvements in Dissolving Gold and other		Przibram	195, 196
Metals out of Ores and Compounds, and ob-		(c.) Ore-veins wholly within Large Eruptive	
taining the Metals therefrom. (B. C.		Formations	196-199
Molloy)	141, 142	Hungary	196
Improvements in Extracting Gold and Silver		The Dacian Goldfield	196, 197
from Ores and the like. (J. C. Macarthur		Verespatak	197
and C. J. Ellis)	142, 143	Vulköj	197
Improvements in extracting Gold and Silver		The Comstock Lode	197-199
from Ores and the like. (J. C. Macarthur		2. Ore-deposits in Soluble Rocks	199-206
and C. J. Ellis)	142, 143	Rodna	199, 200
An Improved Method of, and Apparatus for,		Offenbánya	200
Dissolving, Leaching, and Filtering. (John		Rézbánya	200, 201
Storer and B. T. Lacy)	143, 144	Raibl	201, 202
Improvements in and connected with Coal-cut-		The North of England	202
ting and like Machines. (Frederick Hurd)	144-147	Leadville	202, 203
Colliery-ventilating Machinery	148-150	Red Mountain	204
