* Beef forequarters average 1d. per pound less than hindquarters.

† The butter market was affected in 1906, in the first place by the heavy fall in February, owing to the importations of blended butter from America, and the Continent, together with the British productions; but during June, 1906, and up to the present period a steady advance has been experienced, due largely to the fact of a poor season being experienced in England.

‡ Siberian butter, new season's make, reaches London about April.

§ The new crop of cocksfoot is quoted on London market in May.
