

1908.
NEW ZEALAND.

PATENTS, DESIGNS, AND TRADE MARKS:
NINETEENTH ANNUAL REPORT OF THE REGISTRAR.

Presented to both Houses of the General Assembly pursuant to Section 128 of "The Patents, Designs, and Trade Marks Act, 1889."

IN pursuance of section 128 of "The Patents, Designs, and Trade Marks Act, 1889," I have the honour to submit my report on the operations of the Patent Office for the year 1907.

During the year 2,359 applications were received in respect of patents, designs, and trade marks. This is a greater number than the total for any previous year with the exception of 1906, in which 2,483 applications were recorded.

The revenue amounted to £5,916 4s. 6d., the highest yet received in one year, and the expenditure to £2,602 4s. 10d. This amount is in excess of that for 1906, the difference (£364 5s. 9d.) being accounted for by the increased quantity of work done for this office by the Government Printing Office—£1,254 12s. 2d., as compared with £971 3s. 4d.—and to increases in salaries (£100) on changes in the office staff. The balance, £3,313 19s. 8d., brings the amount received in excess of the expenditure since the commencement of the present Act up to £41,803 17s. 1d.

PATENTS.

There were 1,618 applications for patents, a number exceeded in 1906, but not in any former year. Nine hundred and forty-one provisional specifications and 677 complete specifications were left with the applications, and 303 complete specifications in respect of applications with which provisional specifications had already been lodged, making a total of 1,921 specifications for the year, as compared with 2,055 in 1906. The proportion of complete specifications lodged in the first instance to the provisional specifications filed was considerably higher than it has been for some time past, and a correspondingly greater number of applications may be expected to proceed to the sealing stage.

The applications received were dealt with as follows:—

Accepted without Alteration.			Accepted on Alteration.		Not accepted.	
Without being questioned.	After being questioned		After being questioned.		On Ground of Want of Novelty.	On Ground of Informality.
	On Ground of Want of Novelty.	On Ground of Informality.	On Ground of Want of Novelty.	On Ground of Informality.		
61·6	11·5	1·7	4·7	9·0	9·7	1·9

The fees received in respect of patents amounted to £4,847 0s. 8d., an increase on the total for the preceding year of £222 9s. 8d., due chiefly to the greater number of patents on which the sealing-fee was paid during the year—i.e., 756, as compared with 644 in 1906. Renewal fees also yielded a slightly larger amount, but the fees for registration of assignments, enlargements of

time for payments, and searches show a falling-off. In other respects there is no appreciable difference in the amounts received from the various sources in 1907 as compared with those in the former year.

COUNTRIES FROM WHICH APPLICATIONS WERE RECEIVED.

Nine hundred and sixty-nine, or 59 per cent., of the applications were received from residents of New Zealand, as compared with 1,101, or 63 per cent., of the total for 1906. The Commonwealth sent 321, 47 less than in the preceding year—Victoria, 180 (187); New South Wales, 92 (90); Queensland, 19 (36); Tasmania, 6 (22); South Australia, 17 (11); and Western Australia, 7 (22)—and there was also a falling-off in the small number received from France, 8 (11), and Austria, 2 (4), and a few other places. A greater number of applications came to hand from the United Kingdom, 133 (119); United States of America, 113 (92); Canada, 13 (12); Denmark, 10 (3); Germany, 15 (10); the figures given in parentheses being the number for 1906.

NATURE OF INVENTIONS.

The inventions, as usual, relate to a wide range of subjects, none of which stand out as engaging special attention, the greatest number of applications on any one subject—*i.e.*, “dairying”—being only 4 per cent. of the total received during the year. Applications in respect of the more important industries of the Dominion show a slight advance: “Dairying,” 77 (66)—of which 41 are in respect of milking-machines (19 being in connection with teat-cups), as compared with 22 for the previous year; “sheep-shearing,” &c., “wool and hides,” 50 (36); “fibre-dressing,” 44 (37); “harvesting,” 28 (21): but there is a falling-off in “minerals,” 51 (82); and “cultivating,” 36 (47), from the previous year’s totals, which are given in parentheses. Increases occur in the number of applications received for “building” and “building-materials,” 94 (79)—ferro-concrete construction forming the subject-matter of 14; “railways and tramways,” 73 (70)—33 of which are for trolley-poles and heads, as against 18 for the previous year; “velocipedes,” 66 (42)—of which 24 are for means of protecting the tire; “boots and shoes,” 62 (56); “indicating and calculating,” 61 (41)—due in a greater measure to numerous attempts to provide an efficient temperature-tester for bales of flax and the like; “fencing,” 42 (30)—principally in respect of gates and droppers and standards; and “vehicles,” 40 (38). Fewer applications were received in connection with “engines” (air, gas, steam, &c.), 77 (81); “tools,” 39 (53); “furniture,” 34 (49); “cooking and kitchen appliances,” 33 (63); “lifting, hauling, and loading,” 26 (33); “heating,” 25 (37); amusements, 23 (46); “harness,” 22 (41); “bottles and bottling,” 19 (31)—chiefly in respect of non-refillable bottles; “dredging and excavating,” 16 (24); “preserving,” 15 (5); “washing and cleaning,” 14 (21); “pipes, tubes, and hose,” 14 (20); “pumps,” 14 (23); “shops and hotel fittings,” 14 (27); “valves and cocks,” 6 (19): the other classes remaining about the same.

INTERNATIONAL CONVENTION.

Forty-eight applications for patents were made in New Zealand under the International Convention and according to the special arrangements between this country and the Commonwealth—30 from England, 6 from the United States of America, 2 from Germany, 1 from France, and 9 from Australia. Thirty-six applications were made in pursuance of these provisions in the preceding year, 26 in 1905, and 17 in 1904.

The promptitude with which the specifications are printed and received from England and Australia renders it necessary for inventors in those countries to either lose no time in applying here, or else to avail themselves of the benefits of the Convention and arrangements referred to.

In certain cases applications made in the ordinary form have been brought under the Convention on attention being directed to the prior receipt of the printed specification, but in others the expiry of the twelve months from the date of the foreign application has unfortunately prevented that course from being adopted, and the applications have accordingly been refused.

EXTENSION OF TERM.

A petition, the third in the history of the office, was presented for the extension of a patent, and for the first occasion caveats were entered against an extension. The matter was referred by the Governor to the Court, and in accordance with its report a fresh patent, containing certain special provisions, was granted for a further period of three years.

PUBLICATIONS.

The following indexes have been prepared during the year:—

- (1.) Name Index, from 1861 to 1889.
- (2.) Name Index, from 1890 to 1893.
- (3.) Name Index, from 1903 to 1907.

Owing to pressure of work the Government Printing Office has so far only been able to set up the first index, and it is hoped that this will shortly be printed and published, and be followed as soon as possible by Indexes 2 and 3.

With the completion of these indexes reference will be much facilitated, as the three volumes will leave only the period from 1894 to 1902, for which alphabetical lists have been published annually. These might with advantage be embodied in two volumes, and the whole of the period from 1861 to 1907 comprised in five volumes.

As soon as the name indexes are out of the way, the subject-matter indexes for the same periods should be pushed on with.

While these indexes and abridgements will in some measure meet the wants of inventors, the profession, and the public generally, it must be kept in mind that their requirements in this direction will not be satisfied until the specifications and drawings are printed in full, as is done in England, the United States of America, and Australia.

The classified abridgments of a few of the smaller classes have been completed, but owing to the extent and intricate nature of this work, and to the time of the staff being otherwise fully occupied, expert assistance will be required before any material progress can be made with it.

INSPECTION OF SPECIFICATIONS AT AUCKLAND, CHRISTCHURCH, AND DUNEDIN.

A further step has been taken in the direction of rendering more readily available to inventors and others the particulars of inventions sought to be patented. Hitherto the specifications have only been open to inspection at this office, and any one unable to attend here has been obliged to obtain copies. This has placed inventors in other places at a disadvantage, which has now, to a certain extent, been removed by the office sending one set of the specifications to the local Patent Office at Auckland, Dunedin, and Christchurch in succession. They remain open for inspection for a fortnight in each place, and inventors and others in the leading towns are now enabled to refer to the original documents in time to give notice of opposition to the grant of the patents within the prescribed period of two months from the date of the advertisement of the acceptance of the applications. This arrangement has worked successfully, but, with the other facilities provided by the office, requires to be given greater publicity to be fully availed of and appreciated.

INQUIRY INTO NOVELTY.

It cannot be too firmly impressed on inventors that this office is not required by law to investigate the novelty of inventions sought to be patented, and with its present staff can only do so to a limited extent. Applicants should therefore endeavour, by referring to the abridgements of specifications in the leading towns and other available publications, to ascertain that their inventions have not been anticipated before lodging a complete specification or seeking to obtain protection abroad.

DESIGNS.

Sixty applications were received during the year, and registration effected in 58 cases. This number, though small, is the highest yet reached in any one year, and is an advance of 21 on the previous year's total.

By far the greater proportion of designs were applied for in Class 3 ("articles composed wholly or partly of wood, bone, ivory, papier-mâché, or other solid substances not included in other classes")—*i.e.*, 39, or 67 per cent. of the total number, most of the registrations being effected by one firm. Class 1, "Articles composed wholly or partly of metal, not included in Class 2," comes next with 10 designs, and Classes 5 ("articles composed wholly or partly of paper—except hangings"), 4 ("articles composed wholly or partly of glass, earthenware, or porcelain, bricks, tiles or cement"), 10 ("millinery and wearing-apparel, including boots and shoes"), 2 ("jewellery"), and 13 ("printed or woven designs on textile piece-goods") follow with 3, 2, 2, 1, 1, respectively.

TRADE MARKS.

There were 684 applications for registration of trade marks in 1907, 18 less than in the previous year; and 583 marks were placed on the register, as compared with 515 in 1906. Renewal of marks registered fourteen years ago was effected in 162 cases, or 49 per cent., or about the same proportion as in the former year.

The fees from trade marks amounted to £1,002 18s., £47 19s. more than in 1906, due principally to the larger sum received from registration and renewal fees.

GOODS FOR WHICH TRADE MARKS REGISTERED.

The number of applications in Class 42 considerably exceeded, as in former years, those in any other class, totalling 121, 17 less than in the previous year, and 50 below that for 1905. The principal classes showing an increase are Class 1 (chemical substances used in manufactures, &c.), 21 (16); Class 3 (medicines), 53 (50); Class 4 (raw or partly prepared vegetable, &c., substances), 13 (3); Class 5 (metals), 25 (12); Class 22 (carriages), 16 (12); Class 24 (cotton piece-goods), 7 (0); Class 43 (fermented liquors and spirits), 46 (17); Class 44 (mineral and aerated waters), 16 (6). A falling-off is shown in Class 7 (agricultural machinery), 7 (13); Class 38 (articles of clothing), 32 (41); Class 39 (paper), 14 (27); Class 45 (tobacco), 18 (39); Class 48 (perfumery), 29 (46); and Class 50 (miscellaneous), 53 (63). The numbers in parentheses are those for 1906.

COUNTRIES FROM WHICH APPLICATIONS RECEIVED.

Of the total number of applications received—*i.e.*, 684—residents of New Zealand sent 303, as compared with 332 in 1906; the United Kingdom sent 187, 16 more than in 1906; and slight increases are also shown in those received from the following places: Canada, 5 (1); France, 9 (5); Holland, 6 (3); India, 3 (0); Spain, 12 (0): the numbers in parentheses being those for 1906. There is a falling-off in the number from United States of America, 60 (70); Germany, 13 (19); and Sweden, 2 (4). The Commonwealth sent 114 applications, as compared with 86 in 1906; and of this number New South Wales sent 68, Victoria 41, Western Australia 3, and Tasmania 2.

PUBLICATIONS.

A nominal index from 1861 to 1907 has been completed, but the printing of the list has been delayed owing to the pressure of other business at the Government Printing Office.

The subject index for each class has been completed to the end of 1890, and will be proceeded with as opportunity occurs. A very large amount requires to be done to bring this index up to date, and assistance will be necessary if the index is to be ready for printing within a reasonable period.

GENERAL.

LOCAL PATENT OFFICES.

As already mentioned, specifications are now sent for inspection to the Local Patent Offices at Auckland, Christchurch, and Dunedin, and full sets of the publications of the office have been forwarded to these offices for public use. They will also shortly be furnished with as complete sets as possible of the patent laws of other countries, and with classified abridgments from the beginning of the current year of inventions in respect of which the complete specifications have been accepted. Other additions will from time to time be made to the contents of these offices with a view to affording greater information and facilities to inventors and the public generally in these towns.

At present there are Local Patent Offices at Auckland, Christchurch, Dunedin, Thames, Gisborne, New Plymouth, Napier, Wanganui, Nelson, Blenheim, Westport, Greymouth, Hokitika, Ashburton, Timaru, Oamaru, Queenstown, and Invercargill. The establishment of offices at other towns throughout the country is now under consideration.

OPPOSITION.

Notice of opposition was lodged in 23 cases. Two appeals were heard by the Court, the decision being upheld in one instance, and in the other reversed—on evidence, however, which was not before the office when it determined the matter.

PREMISES.

The growth of this office, and of the library attached to it, will shortly necessitate the provision of further accommodation. As it was considered inadvisable to increase the weight on the floor of the room used as a library, the necessary additional shelving has been provided in the other rooms, and will possibly suffice for the next year or two. A slight rearrangement of the office has provided sufficient additional room to meet the requirements of the staff for possibly the same period; but it is found that the room for the public and profession, and in which cases are also heard, is not large enough for the purpose, and better provision is required. The most urgent want is safe-accommodation, which is at present very restricted, and many of the valuable records of the office have to be kept in the basement, where they are somewhat insecure and very inaccessible.

PATENT AGENTS.

Five Patent Agents were registered during the year, 2 after examination and 3 solicitors, who are eligible for registration without examination; 72 names are now on the register, 52 being those of solicitors.

A copy of the papers set in the two cases in which examinations were held is inserted in the Appendix.

The proportion of applications received through Patent Agents (75 per cent.) shows that their services are freely availed of by inventors, who evidently realise the value of expert assistance in the preparation of their specifications and other work which this office cannot undertake.

LIBRARY.

The set of English specifications has been rendered complete by the receipt of a hundred volumes of back numbers from the English Patent Office, which very generously supplies this office with all its printed specifications, abridgements, journals, and indexes, as well as furnishing the Public Libraries at Auckland, Christchurch, and Dunedin with the abridgements.

It is, I consider, desirable that not only the abridgements, but also the full specifications and drawings of the many thousands of inventions patented in the United Kingdom and the United States every year, and which, with the exception of the small percentage patented here, the people of this country are at full liberty to use, be freely open to inspection in the leading towns.

Ready access to these specifications would also be of great benefit to inventors in enabling them to ascertain if and to what extent their inventions have been anticipated, and thus avoid much useless expenditure of time and money.

The library attached to this office is at present only open during office hours, and, to be made full use of, should be available at night to inventors, students, and others. As this Office is not the sole occupant of the building there are certain objections to opening it at night, which, however, it is hoped, may be overcome.

The office at present contributes to the Library Edition of the United States Specifications, but, unless these volumes can be received earlier than at present is the case, I think it will be better to obtain the ordinary specifications. The cost of these will be greater and they will occupy more space, but they will be sent to this office as soon as the specifications are printed, instead of being delayed for three or four years.

APPENDIX.

PAPERS SET AT EXAMINATION OF CANDIDATES FOR REGISTRATION AS PATENT AGENTS.

No. 1.

1. What are the requisites of a valid patent? and state the leading principles on each point.
2. In the event of the death of an inventor before the registration of a patent for his invention, what steps are necessary in order to enable his representative to obtain a patent for such invention?
3. What are the essential requirements of a complete specification?
4. How, and under what circumstances, may a prolongation of a patent be obtained?
5. What do you understand by a "master" or "pioneer" patent; and what are its advantages? Give illustrations.
6. During the course of an action for infringement of a patent the plaintiff finds his specification is defective: can he amend his specification; and, if so, how, and what consequences follow?
7. Does a person who untruly represents as patented an article sold by him incur any, and, if any, what, liability?
8. Is it permissible for a patentee to continue holding his patent without working it in the colony? If not, state what remedy is available, and by whom any proceedings can be instituted to obtain the benefit of the patent, also the nature of such proceedings.
9. What are the special provisions relating to the granting of patents for improvements in instruments or munitions of war?
10. State shortly the provisions under which reciprocal arrangements for the protection of inventions may be entered into by other colonies and foreign nations.
11. Can a patent for a new use of a known contrivance be granted; and, if so, under what circumstances?
12. Discuss the doctrine of "mechanical equivalents," and give illustrations.
13. What are the essentials of a "trade mark"; and what are the remedies for an infringement of a registered trade mark?

No. 2.

1. What factors are necessary to the validity of a patent?
 2. Explain fully the requisites of—
 - (a.) A provisional specification.
 - (b.) A complete specification.
 3. A applies for a patent for an article patentable under ordinary conditions; but the identical article was produced some fifty years ago by a person who kept the method of manufacture a secret and whose secret died with him: is A entitled to a grant of letters patent?
 4. What is the meaning of "provisional protection"; and what are its advantages and disadvantages?
 5. What is meant by "new manufacture" and "prior publication"?
 6. What rights are acquired in foreign countries by a person who obtains provisional protection in New Zealand?
 7. What right has the Crown to the use of a patent obtained by an individual?
 8. What steps must the holder of a British patent take to protect himself against an infringement in this colony?
 9. In what way may a specification be amended; and what is the procedure?
 10. Define "trade mark" and "trade name"; and distinguish from "patent."
 11. What is the procedure for obtaining extension of the term of a patent? For what period can extension be granted? Upon what grounds can extension be granted?
 12. What constitutes "newness of manufacture"?
 13. What is meant by "general public utility"?
 14. Who may apply for the revocation of a patent?
