

The oil, gas, and water power plants would be as near as possible actual brake horse-power. The steam plants show the nominal horse-power of boilers used calculated from the heating-surface. The Department has no record of the actual brake horse-power of steam-engines in use with such boilers, and this information would be difficult to get.

ROBERT DUNCAN,
Chief Inspector of Machinery.

Inspection of Machinery Department, Wellington, 1st May, 1911.
