

be taken by the national standardizing bodies in those parts of the Commonwealth affected to secure a greater degree of uniformity in standard specifications and trade practices.

VI. With a view to the employment of common standard specifications for aircraft materials and component parts, and particularly the method of testing therein specified, the Conference recommends that the national standardizing bodies in those parts of the Commonwealth particularly concerned, should co-operate directly with this object in view.

VII. The Conference, taking note of the observation contained in the last paragraph of the Report of the Conference on Standardization accepted by the Imperial Conference of 1930, which reads as follows:—

“Apart from day to day consideration of matters of detail, we are impressed with the desirability of readier means of consultation on questions of policy than are afforded by the past, or by occasional conferences such as the present,”

is impressed with the desirability of obviating the difficulties and delays which inevitably occur under existing conditions in conducting consultations between the central standardizing bodies in the various parts of the British Commonwealth of Nations, and the misunderstandings which occasionally arise due to the distances between the correspondents and to the subject matter of the communications.

The Conference recommends that for the purpose of maintaining closer liaison in these matters the central standardizing bodies in the different parts of the Commonwealth should be authorized to call together, periodically or otherwise, representatives in their respective countries of the corresponding bodies, or persons otherwise designated for the purpose.

The Conference further suggests that such an arrangement might include a provision whereby the Trade Commissioners maintained in different parts of the Empire by the several Commonwealth Governments should, as occasion requires, be available to act as Liaison Officers for this purpose. The Conference considers that it should be made clear that such consultations are purely supplementary to, and not intended in any way to supplant, the method of direct communication already established between the central standardizing bodies.
