## C.—ANTE-NATAL CLINICS.

First visits—										
Primiparæ ..	..	207	135	34	42	51	40	166	675	..
Multiparæ ..	..	563	381	151	149	178	102	516	2,040	..
Return visits ..	..	3,326	2,038	398	352	570	343	2,802	9,829	..
Outside visits ..	..	121	158	14	15	10	8	193	519	..
Obstetrical outfits sterilized ..	..	155	..	25	1	14	9	96	300	..

Table II and Group III of Table I show the tabulated results of these hospitals. The number of deaths was six, of which four were attributable to puerperal causes, namely: 1 eclampsia, 1 embolism, 1 post partum haemorrhage, 1 to status epilepticus (? eclampsia), and two to non-puerperal causes—namely, advanced phthisis.

The forceps rate was 4·55.

## DISTRICT NURSING DEPARTMENT:—

These Departments attached to the Auckland, Wellington, and Christchurch St. Helens Hospitals have done useful work and been most helpful in giving medical attention to the poorer classes and at the same time preventing overcrowding of these institutions which was always a difficult matter to deal with, especially during times of economic stress.
