

Envron is the first premium quality oil that's both kind to the environment and your car.

Kind because it's recycled here in New Zealand from the country's used oil. Oil that

would otherwise be poured down drains, dumped in land-fills, burned off or just left on the ground.

Every year, New Zealanders generate some 40 million litres of waste oil.

It's then re-refined and formulated at our refinery using one of the world's most advanced techniques, specially imported from Switzerland.

And the end result is Envron – an advanced multi-grade oil that meets the world's highest standards.

Or if oil ratings mean anything to you, it meets the requirements of API SG performance and SAE 15W-50 – the top rating for car engine oils.

# KIND TO HATCHLINGS AND HATCHBACKS.

Most of this disappears into the environment. It finds its way into our rivers, lakes and sea – threatening our wildlife and fragile ecosystems.

But it needn't happen. That's why BP is taking the initiative by introducing Envron.

## Envron. The environmental answer.

The recycling operation we've set up in New

Zealand involves the collection of millions of litres of waste oil a year from garages, from industry and community collection points.

This makes Envron ideal for all cars and light commercials – including diesels.

Even the turbo-charged amongst you can put Envron through its paces without a bead of worry.

Our environmental efforts, however, don't stop with the oil. The packs are also made from recycled plastic.

So choose Envron for your car. Your engine won't notice the difference, but the environment will.

Available in 500 ml and 4 litre packs from BP and all green workshops.
