## ELECTRONIC EAR ...

TURN down the volume on an orthodox radio. Notice how the low notes and the very high ones tend to disappear. That's because of a strange fact that scientists have named "scale distortion" — the lessened sensitivity of the human ear to high and low notes at low volume levels.

Now listen to the new Columbus with the volume turned down. But first set the Electronic Ear—that remarkable 11-point tone control—to Position 6. You'll hear the same balanced rendering you heard at normal listening level. The Electronic Ear gives you the low and high notes you'd otherwise miss . . . and perfectly balanced reproduction.

This amazing Columbus feature does more—reduces static on distant stations, gives wonderful fidelity on normal reception, and clarity at all times. It's another Columbus exclusive!

### ILLUSTRATING "SCALE DISTORTION"

At normal volume you hear all the notes as in the picture at left; at low volume the ear is less sensitive to high and low notes and the musical balance is distorted, as at right.
