**Fidelity means—  
all the notes...  
all the music..  
all the time**

If you are in the habit of "making allowances" for radio reproduction then you owe it to yourself to hear a Columbus.

For Columbus, with its reproduction controlled by the amazing Electronic Ear, mirrors note for note the living realism of the performance before the microphone. The Electronic Ear—an electronically operated 11-point tone control—provides something no other radio has ever done before... a correct setting for each volume level.

For instance, at low volume on ordinary radios music appears "thin"—due, simply, to the lessened sensitivity of the human ear to low and high notes. But the Electronic Ear restores those missing notes and gives you fidelity at a whisper.

The Electronic Ear is just one exclusive feature of an exclusive radio. Columbus Calibrated Band-Spread Tuning brings broadcast tuning ease to shortwave. And the beauty of Columbus cabinets provide a fitting setting for this triumph of electronics.

See and hear Columbus Radio for yourself.
