

"Little Treasures"

The LEON MINIATURE PORTRAITS IN OILS

Aptly described as "treasures in little," miniature portraits are the most exquisite of treasured possessions. Painted by artists highly skilled in the technique of fine detail and colour and framed in a very attractive triple moulded dark gold shaded frame with a convex glass, the paintings measure only 2½ by 3 inches. Their beauty is an everlasting joy.

To obtain a miniature painting of a loved one it is only necessary to supply a good clear photograph, any size, with full particulars of colouring. The artists then produce it for permanence and beauty in the best quality oil pigments.

G.E.C.

THE GENERAL ELECTRIC CO. LTD., OF ENGLAND.

in war—as in peace—

at the service of the Empire

An important example of how electrical inventiveness has served the urgent needs of war—afterwards to become of great service to industry generally, when the war is won—is the Mobile Rectifier Substation.

This is transported by road or by rail to wherever it may be required and, for example, provides direct-current supply to building sites; or to docks where ships are being loaded, unloaded, or undergoing repairs; to centres where it will be available for traction purposes; or to a position adjacent to a permanent substation that is temporarily out of action.

In surmounting the innumerable problems that have arisen in all applications of electricity, including the important one of electronics, the technical experience and scientific advancement of the G.E.C.—the largest British electrical manufacturing organisation in the Empire—have been enriched to a degree that will be of incalculable value to all electrical services after the war. Then, just as the resources of the G.E.C. have been available for the war effort, they will be at the disposal of all concerned with reconstruction in any part of the world.

Electrification Schemes

G.E.C. Electrification Schemes have been applied to all industries, including: Aircraft Factories; Chemical Works; Collieries; Food Factories; Gold Mines; Iron, Steel and Copper Works; Locomotive and Railway Carriage and Wagon Works; Motor Car Works; Ships and Shipyards; Textile Mills; Oil Refineries, etc., etc.

G.E.C.—always in the forefront of electrical progress
