

## DO YOU KNOW?

Anne Boleyn believed that chewing the root of the rosemary plant was a sure protection against toothache. Beauties of today rely on Kolynos Dental Cream. Your teeth are cleaner after brushing with Kolynos, so naturally they're whiter, more sparkling. Kolynos is made from the formula of a famous dental surgeon, Dr. N. S. Jenkins.

The Australian Ant-eater has fifty more teeth than any other land mammal, yet it hardly ever eats anything but soft ants.

It would take £12/10/- to restore the average mouth to dental health, according to the U.S. Dental Association. Twice-daily brushing with Kolynos will help you to cut down on your dentists' bills. Kolynos swirls into all those interstices where dangerous food deposits collect.

In Sumatra a kind of medicinal cigar is smoked to prevent toothache and stop pain.

Do you know that Kolynos is also available as a Tooth Powder? Cleans with the same thoroughness as Kolynos Dental Cream. You might like Kolynos even better in this form—why not try it? At chemists and stores.

South Sea Islanders used to take a porpoise tooth into battle to bring them victory over their enemies. Are your teeth as white and shining as they should be? If they're not, get to work with half an inch of Kolynos on a dry brush after every meal. Kolynos leaves your teeth whiter—whiter, because they're so much cleaner.

## UNWASHED HANDS ARE DANGEROUS

Unwashed hands spread disease. Keep yours clean. Plain soap and water, and plenty of it, will do it.

Before handling food or dishes the hands must be carefully washed. Unclean hands and finger-nails which have become soiled through contact with nose, mouth, handkerchief, body waste, discharges or sores, harbour countless germs. Some of them are capable of causing serious illnesses and epidemics.

The human bowel is alive with germs which are essential for the proper functioning of the body. But even a healthy individual may harbour disease germs which are dangerous when transferred to food. Dysentery, summer sickness and typhoid are examples.

Consequently, washing of the hands after every visit to the lavatory is a strict necessity. This rule is applicable to EVERYONE, and particularly to food-handlers.

Food poisoning can be prevented by clean hands, cool storage and protection from contamination.

Think of the other person, and keep those hands clean.
