### LOVELINESS BEGINS WITH SHARLAND'S

It's not what you put on last that gives you true loveliness . . . it's what you use *first*. And that should always be Sharland's Lotion. Cool and fragrant Sharland's refines and whitens the skin, makes a perfect powder base that assures a flawlessly smooth complexion. For hands too be sure it's . . .

## NZBS Staff Changes

Spencer Digby photograph

HERE are three of the NZBS personalities affected by the service staff changes announced in the last issue of "The Listener": A. L. Curry (bottom right), whose voice became familiar to Canterbury listeners over a number of years while he was chief announcer at 3YA Christchurch, and to a wider audience during his service overseas as officer-in-charge of the New Zealand Broadcasting Unit in the Middle East, goes to 2YA Wellington as station manager. He will take over from A. B. C. Young (left), who has been acting station manager and who will return to his former duties as supervisor of programme organisation for the whole Service. H. C. Trim (lower left) travels just about as far as anyone could in a transfer within the Service, moving from his present position of station manager at 4YZ Invercargill to take over the management of 1YA Auckland, the post made vacant last year by the resignation of W. A. F. O'Donoghue.

## FACTS AND STATISTICS

"QUOTE 'em some figures! They can't explain them away!" In the next four weeks, starting on Tuesday, August 27, Winter Course talk speakers from 4YA will tell us something about the nature of figures in a series intriguingly titled *Lies, Damned Lies and Statistics*. The first talk, "What Luck, the Laws of Chance," will be given by Dr. Harold Silverstone, M.A., Ph.D., assistant lecturer in mathematics at the University of Otago. Bridge-players will be interested in this talk, for Dr. Silverstone will estimate the statistical probability of the recent extraordinary hand dealt in four suits at the Dunedin Bridge Club. He will give a further talk on Tuesday, September 3, entitled "Statistics Come of

Age," in which he will trace the genesis and development of statistical method.

Especially since the United States Army introduced group intelligence testing in the first World War, a great deal of interest has been shown in the statistical measurement of the human mind. On Tuesday, September 10, G. W. Parkyn, M.A., lecturer in education at the University of Otago, will discuss the techniques involved in this work. The last talk in the series, on Tuesday, September 17, will be by J. Williams, M.Com., research lecturer in industrial organisation at the University of Otago. He will summarise the important position held by statistics in relation to modern industry, economics, agriculture and other fields.
