

How to make a

short pastry shell

for fruit and meringue tarts

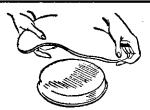

Mr. S. Galloway, of the Better Baking Bureau, leading chef, baker and pastrycook, offers you this practical recipe and method for use with Phosphate Baking Powder.

RECIPE

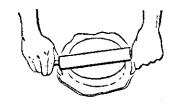

1lb. flour, 1/8 teaspoon Phosphate Baking Powder, 10oz. shortening, 3 or 4oz. castor or icing sugar, 1 egg, pinch salt. Rub in one third of the shortening. Cream balance of the shortening, sugar and salt. Beat in the egg—shortening, sugar and salt. Beat in the egg—work in balance of flour. Stand in cool place for half an hour before using.

These shells may be filled with any kind of cooked fruit or jelly and fruit—custard may be poured over the fruit—partly cooked strawberries with juice thickened and topped with ice cream. Meringue torts—3/4 fill shells with cooked fruit, apples, etc., cover with meringue and return to oven for a few minutes. The shells may be made without sugar and used for cottage pie, savoury mince, etc., topped with mashed potatoes.

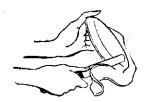

Roll pastry to about 1" thickness. Place over sponge tin (5"-8" diameter) upside down.

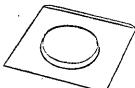

Roll with pin to flatten on to bottom of tin.

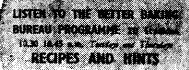

With edge of fingers press pastry into side of tin.

Hold tin in hand and cut off surplus pastry.

Place on oven tray pastry uppermost. Bake 15 minutes in moderate oven.

Remove sponge tin. Shell is ready for filling.
