COSMETICS . . . and Cough Medicines . . . as different as chalk from cheese . . . but there is sound reason why you should go to your Chemist for both. Just as your Chemist insists on accuracy in prescriptions so does he insist on absolute quality, freshness and purity in the every-day things he sells. That's why wise people buy cosmetics, toiletries and all personal needs at their clean, friendly pharmacy. It's a guarantee of quality.

What is behind Electronics?

it's the Vacuum tube developed by Brimar

What is a vacuum tube? It's a highly delicate precision built electrical valve—playing a vitally important role, because without it there would be no Electronics. Foremost in the development of electronics, of radio and television broadcasting equipment, and of Radar, was S.T.C.-made Brimar. Years of leadership, of achievements in technical experiment are linked with the development of Brimar Radio receiving valves.

Always specify Brimar. The valve with the world reputation for strength and reliability.
