# AUSTIN

## 2-3-5 TON TRUCKS

## POWERFUL! DEPENDABLE! ECONOMICAL!

The rugged Austin 6-cylinder o.h.v. truck engine is designed for heavy-duty work — develops ample power for maximum loads, with exceptional pulling power at low speeds.

Austin precision engineering cuts repair and replacement costs to an absolute minimum . . . Austin for long life and complete Dependability.

Hundreds of Austin Truck owners can vouch for their running economy and unusually low cost per ton-mile.

The Austin 6-cylinder O.H.V. engine is specially designed for truck use and is not an adapted passenger car engine. Develops ample power for maximum loads with exceptional pulling power at low speeds.

Cab in semi-forward position brings centre of gravity well forward thus distributing weight evenly over all four wheels. Allows longer platform space with minimum overhang, shorter wheelbase with smaller turning circle.

You can depend on them!

These entirely post-war British Austins are the outcome of 6 gruelling war years of testing and proving Austin Dependability under the toughest conditions trucks have ever known. To-day, they are the willing work-horses of New Zealand transport—rugged, powerful—able to perform the heaviest tasks day after day, year after year, with a minimum of maintenance and with a payload performance so typical of Austin DEPENDABILITY.
