NOW! the new ammonium ion dentifrice THAT helps reduce tooth decay

Manufactured
under license
from
UNIVERSITY
OF ILLINOIS
FOUNDATION

Here is a convenient way to use INGRAM Tooth Powder. First tilt a clean glass tumbler and pour $\frac{1}{4}$ teaspoonful of powder on the inside curved surface. Then moisten toothbrush, dip it into powder and brush all surfaces of the teeth and gum margins. Finally, pour water on remaining powder in glass until one-third full. Mix, use as rinse, retaining in mouth for full minute. Do not follow with clear water or other rinse.

What glorious news for you and your family! Ingram ammonium ion Tooth Powder is now available in New Zealand. Based on a formula developed by the University of Illinois Foundation as a result of years of research into the etiology of dental caries, Ingram ammonium ion Tooth Powder is a new scientific approach to the problem of tooth decay. Results of preliminary clinical studies indicate that this new dentifrice is helpful in reducing tooth decay when used consistently as directed.

Mothers! INGRAM ammonium ion Tooth Powder can be used with complete confidence from early childhood onwards. This is the ideal dentifrice for the kiddies! No more trouble getting them to clean their teeth when you have Ingram ammonium ion Tooth Powder in the home — they'll love its pleasant, clean, minty flavour. Start your kiddies on Ingram ammonium ion Tooth Powder today.

Manufactured by Bristol-Myers Co. Pty. Ltd.,
127 Manners Street, Wellington.
