

HIS MASTER'S VOICE *presents*

HOSPITAL-CLEAN WASHING

SOAP-WASHED in foaming suds

H.M.V.'s scientifically designed agitator produces an over-and-under, soft, cushioned swirling action that forces foaming soapy water through every garment, so that each article is washed till it is perfectly clean and fresh. Though vigorous, the action is so smooth and gentle as to be harmless to the sheerest silks. That is SOAP-WASHING.

HEAT-WASHED in cleansing steam

Combined with the agitator to produce the high washing efficiency of the "H.M.V." is the scientifically designed tub. The Steri-Seal cover has a special rubber gasket around the edge, and this—fitting tightly against the cushion seal on the rim of the tub itself—holds in the steam and keeps the water hot. That is HEAT-WASHING.

The combination of soap-washing plus heat-washing, gives you clothes cleaner than you've had before—clothes which are literally 'Hospital-clean.'
