plus **C.I.**

1. IMPROVED COMBUSTION.

Because combustion chamber deposits are prevented, more efficient burning of the fuel-air mixture is secured.

2. GREATER POWER OUTPUT.

As deposits build up, the compression ratio increases, result—detonation or knocking. Eliminate detonation and maximum power is developed.

3. MAXIMUM MILEAGE.

Through efficient combustion, every degree of heat in the fuel is converted into useful work, thus providing maximum mileage.
