THE "EXSTAT" PRINCIPLE

Most interference on normal aerials is picked up on the down lead via the house wiring and metal piping, etc. The "Exstat" system provides complete screening and eliminates all such pick-up. The aerial proper is mounted above the interference zone, the "pure" signals from the aerial are conveyed to the receiver without loss, and are completely free from interference. The "Exstat" transformers, which embody the latest technique, ensure maximum signal strength, over a range of 150 Kc/s to 30 Mc/s.
