

"Is it vacuum pressed?"

Customer: "I've heard that having a vacuum pressed sink top is most important".

Salesman: "Yes — it's important because with a vacuum pressed sink top you can be sure of a perfect life-time bond between the Formica and the backing".

Customer: "And what exactly is vacuum pressing?"

Salesman: "The Formica is bonded under vacuum with super-heated compressed air, giving you a smooth, perfect finish".

Customer: "It costs more?"

Salesman: "No—because of high production, Rickstan sink tops—both standard and in special sizes—cost less than any other brand and they're guaranteed for five years too".
