Liquid Air Tests.

At the time of the first commercial production of liquid air, several years ago, a number of untenable claims were made as to its practical applications. One of the most valuable uses to which the liquefaction of air has been put is that of the subsequent separation of the oxygen and nitrogen by fractional distillation and rectification. The possession of such a substance as liquid air, however, has proved of much value in the study of the behaviour of various metals at low temperature. It is generally assumed, for instance, that at very low temperatures metals become brittle, and even fragile, and in numerous cases the breaking of steel rails in winter weather has been attributed to this cause. By the use of a bath of liquid air it has been found practicable to test various metals and alloys at temperatures as low as 180 degrees centigrade; and this has led to the discovery that while many steels have their tensile strength increased, their ductility lowered, and their brittleness raised at low temperatures, this is not always the case. Mr. Hadfield has shown that a nickle manganese steel can be made which will be as tough, if not tougher, at 180 degrees centigrade below zero than it is at ordinary atmospheric temperature, and this, too, without material change in the tensile strength. Liquid air has also been used for quenching specimens after tempering, and some instructive information has been obtained about the process of hardening in this way. The much heralded liquid is thus becoming useful in ways not considered by its original exploiters, and will doubtless find increasing application of similar nature.—*The Forum.*

Waste.

It will be readily conceded that one of the most important, one of the most characteristic, features of the utilitarian science of to-day is its application to the profitable utilisation of waste products. Next to this, and almost its equal in importance, is the scientific destruction of trade and other waste. It is not too much to say that in the scientific destruction of waste material there is a mine of wealth.

Mr. L. G. West,
Architect.

Palmerston North.

BE MORE THAN A BREADWINNER!

Be a Money-Maker, by letting your money work for you. **DO YOU WANT TO KNOW HOW?** Write for our interesting little Booklet (No. 37), entitled "Points for the Wise," which gives a lot of useful information about Real Estate Investments.

FORD & HADFIELD,
Auctioneers, Sharebrokers, Estate Agents,
158-160 Hereford Street, CHRISTCHURCH.

SPECIAL ADVERTISING SERVICE FOR SMALL ADVERTISERS.

As you know it is not your newspaper SPACE that sells goods, it is the matter THAT FILLS THE SPACE.

I have a specially attractive proposition for small or local advertisers. Under my plan you get five strong, pulling advertisements for one guinea, or twelve for two guineas. It's worth while.

Write me to-day for particulars. Can only handle a limited amount of business. Hastily.

**Ronald S. Badger,
Advertising Agent. CHRISTCHURCH.**
