

**T**HERE are strong reasons in favour of using "POILITE" Asbestos Cement Building Sheets, either for outer walls for buildings or for interior walls, partitions and ceilings.

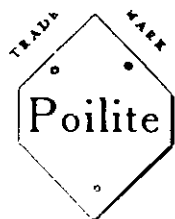

"POILITE" sheets are made of the best British Portland Cement reinforced with winnowed Asbestos fibre which materially strengthens the cement.

As a result, "POILITE" sheets are everlasting and fire-resisting—thus reducing fire insurance.

For outer walls "POILITE" sheets are often treated with rough-cast finish, thus obtaining the effect of a solid concrete or brick construction at much less cost.

The lesser quantity of labour required and absence of waste as compared with timber buildings often results in a material saving in favour of "POILITE."
