

To Architects .. and Contractors

GENTLEMEN,

It will be conceded by all of you, that the consideration of first importance in the erection of Building is "a sure foundation," and in this connection I would bring under your notice **Dominion Cement**. This Cement has been put to the most exhaustive tests, and gives the best results under varying conditions.

Another vast improvement in the erection of fire-proof walls is **Button Lathing**. This Lathing consists of Asbestos Sheets with buttons on the surface to give a good key for plaster. The Lathing can be nailed direct to studs, etc.

To obtain the best possible finish for interior walls, I would ask you to investigate the "**Cafferata**" **Products** including Cafferata Keene's Cement, Cafferata Plaster of Paris, and "Victorite" all of which give high class finishes at moderate cost.

Coming later to the decoration of your building, let me ask, have you examined the merits of British owned and British made "**Paripan Enamel**"? This enamel is specified for all best Hospital interiors, for Marine work, and Motorcar painting, etc. This Enamel dries hard in 24 hours, actually improves with washing, and its only fault is, that it does not require renewing often enough. Government House, Auckland, has just been decorated throughout with **PARIPAN**, and the demand is rapidly increasing for this excellent line.

For the painting of Cottages and Farm Buildings nothing can excel "**Ramsay**" Ready Mixed Paint in gallons and half-gallons. The home of the Ramsay Paint is Montreal, Canada, where it has been made for 100 years. The sale of Ramsay Paint has this year broken all previous records, and satisfaction is expressed by all buyers.

I will be happy to supply further information on the above lines on application.

A. A. Carson, Representative

30 HUNTER ST. .. WELLINGTON.

Box 647, G.P.O. Telegrams: "Valu" Wellington.

Can you use any or all of :: these Guaranteed :: Building Materials ?

- 1.—**TOXEMENT**. A powder for placing in Cement Mixtures to effectively fill voids and make them damp and water-proof. Can be used on outside Stucco or Rough Cast or on the inside of Basements and Cellars. Does not in any way reduce the setting strength of the mixtures and is permanent. The most successful material on the market for making damp cellars dry.
- 2.—**LIQUID KONKERIT** for painting walls which let damp through. Can be supplied in Natural Cement Color or other colors. Concrete Blocks, Stucco or Brickwork can be made to resist the heaviest weather.
- 3.—**CEMENT FILLER** and **FOOR PAINT** for making Cement Floors and Dadoes oil-proof, water-proof and dustless. A necessity in engine rooms, hospitals, garage and machinery floors.
- 4.—**R.I.W. PAINTS** for protecting Steel, Iron or Concrete. Will resist the effects of Acids, Chemical Fumes, etc. Used in Freezing Works, for Lime pipes, Condenser coils. A different paint for different troubles. No need for Cavity walls in brickwork. Make your walls solid, consequently, twice as strong: paint inside with **R.I.W. Paint**, and plaster with **Lime and Hair Mortar**. No damp can ever strike through.

Remember It's Water-proof.

TRUTH IN PHOTOGRAPHY

Bartlett Photographs

Mr. W. H. Bartlett never turns out faked or stodgy photographs, or mere hard charts of the obvious.

Every portrait from the **Bartlett Studio** is a faithful and familiar expression of the originals; they are **True Portraits** of people as they are; every picture portrays a phase of **Actual Character**.
