

THERE IS NO

Floor finish for Bathrooms, Hospitals and other Public Buildings that gives such satisfactory results

as

“DECOLITE” FLOORING.

The method of laying “DECOLITE” in a solid mass renders it a waterproof covering that is ideal for Bathrooms, etc. It is also free from the cold chill that strikes up from lead or linoleum.

“DECOLITE” Flooring has so proved its utility by years of satisfactory service in Hospitals throughout the Dominion, that it is now regularly included in the specifications of leading architects for this class of work.
