

# "FIBERLIC"

is the trade name of an improved WALL BOARD, manufactured in the United States from the long, tough and remarkably strong fibres of imported roots.

Treatment by chemical and mechanical processes forms a homogeneous board of even texture, close grain and strength, that is a revelation to those who have not used it. **"FIBERLIC"** makes an ideal lining for Walls and Ceilings, is easily fixed, can be finished to suit individual ideas, and costs nothing for upkeep.

In a Report to the War Trade Board, the Officer-in-charge of General Engineer Depot, U.S. Army, Washington, reported as follows:—

"Their Wall Board is known under the trade name of 'Fiberlic.' They are now furnishing the General Engineer Depot some 50,000 pieces of 4 ft. x 8 ft. in size per month. The Wall Board which they furnish is a much higher grade than is sold in this country, is of exceptional strength, very highly water-resistant, and can be used for external purposes."

You cannot do better than follow the lead of the U.S. Army authorities who selected  
**"FIBERLIC"** as the best Wall Board for military requirements.
