BY TO LISTEN STAND TO FATHER CHRISTMAS

URGENT---RADIOGRAM

I want every home to have a Radio by Christmas-if not this year, then next!

There are so many homes now, I'm frightened I might miss some on my rounds, but if you all have a radio I can talk to you all at once and make sure no one is forgotten. So, little listeners, I want you to help me; speak to Dad. If we could talk together what a lot of time it would save.

This is the most wonderful time in all the world. It has taken all the bygone ages to make to-day. I've seen them all, but I like today best. And I know the future is going to be better still—the world is getting brighter and happier all the time—and the brightest and happiest thing is just Radio, because it spreads Joy and Happiness—and they are the only things that can travel as fast as

Now, are you ready? Stand by for Christmas-time! YOUR FRIEND,

SANTA CLAUS.

1YA TO BROADCAST MADAME AINSLEY *IN CARMEN*

N outstanding event of next week's programme from 1YA, Auckland, will be the relay of Madame Ainsley's performance of Carmen, from His Majesty's Theatre on December 20. (See programme section for details.)

In this production Madame Ainsley is establishing musical history, for this will be the first time in New Zealand such a staging has been attempted in such a way. Madame Ainsley will be supported by a cast of over 60. Last year Auckland music lovers were given a series of operatic excerpts by Madame Ainsley, including scenes from "Aida," "Il Trovatore," "Rigoletto," "Faust,"
"Orpheus" and "Martha.' This year an even wider audience will be permitted to enjoy the glorious music of "Carmen' through Madame kindly consenting to the relay for the special benefit of music lovers at a distance whose opportunities for hearing the best are so limited.

The ballets will be arranged by Miss Daphne Knight and the whole production will be such as to merit the fullest possible support. Madame Ainsley will, of course, take the title role, and the supporting company will include Misses Nancye Hanna, Letitia Gardner, Marjorie Fair, Mary Hamilton, Irene Frost, Messrs. Jean Dellore, J. de Montalk, Hugh Woods, Morton, Davies and Burr. An orchestra of picked musicians will be under the very able conductorship of Mr. W. E. Webb.

BRILLIANT OPERATIC CAREER,

Madame Ainsley's experience in the operatic ..eld has been very extensive. Parisian papers contain notices of her girlhood appearances at Marchesi studio concerts. As Dame Melba's protegee and special friend, Miss Ainsley found every door opened; for the Marchesi studio was a veritable salon. Here the brightest, gayest and wittiest followed in the wake of Melba and her brilliant entourage, and the great diva, then at the zenith of her glory, showered not only gifts, but personal training on the talented young New Zealander.

After her training was complete she made her debut in London at the then Bechstein Hall, in the presence of the King and Queen, then Duke and Duchess of York, and a brilliant gathering of the English aristocracy. This was followed by a Royal command performance, at which a treasured

souvenir brooch with the Royal monogram in diamonds was presented to the young singer.

Numerous engagements followed-Albert Hall and Queen's Hall concerts, provincial tours through England, Scotland and Ireland with Backhaus, Busoni, John McCormack, and with Melba herself. Also extended contracts for the Chappell Ballad concerts, where the popular publications of this great house are first presented to the public at the Queen's Hall, London.

Thus Irene Ainsley sang her way into the hearts of the public, and incidentally lost it to the brilliant baritone who was one of the principals of the Joseph O'Mara Grand Opera Company.

Her marriage in 1912, practically decided her operatic career, and for six years she held contracts with, first the O'Mara Co., and later the Carl Rosa, playing such roles as "Carmen," "Amneris" in "Aida," "Azucena" in "Trovatore." Gluck's "Orpheus" was revived for her by Mr. OMara and her success in the very exacting title role was instantaneous, as her numerous Press notices testify.

KNOWN AS THE "ENGLISH CARMEN."

During the war years her career went on undimmed, until her widowhood, when a chance meeting with Miss Lilian Baylis opened out a new vista. Miss Baylis runs opera all the year round in London in conjunction with Shakespearean and classical plays. Her successful management of this scheme has secured for her the much-prized doctorate conferred by the Oxford University. At the old Vic Madame Ainsley had continual success, and became the favourite English "Carmen."

Those who cannot personally attend the outstanding performances arranged for His Majesty's on December 19 and 20—and that they will be well worth seeing and hearing is certain-will be well advised to "tune in" 1YA on the evening of December 20. Many a country home on that evening will have cause to thank Madame Ainsley for her "relay."

Christmas Atmosphere in Next Week's Programmes

Special Attractions For Children

There will be many Christmas carels and sacred sough fleating

carols and sacred songs floating through the air next week, for the broadcasting stations are honouring the auspicious occasion.

A talk on "The Christmas Festival and its inference" is a very litting subject for the occasion, and will be given by the Rev. Ben. Dudley on Wednesday exening.

A distinctly Christmas-time concert will be given at 3YA on Thirsday. There will be Christmas songs, stories, and carols.

MADAME GOWER-BURNS
OUARTET.
Handel's "Messiah" is the source
from which the Madame Gower-Burns
Quartet has chosen its items. Assist-Quartet has chosen its items. Assisting the soloists will be the choir of the East Belt Wesley Church. The choir will sing the chorus to "There Were Shepherds Abiding in the Field" and "Glory to God in the Fighest," which will be sung by Madame Gower-Burus. Madame will also sing as a solo "I Know That My Redeemer Liveth." Miss Jessie King (contralto) will sing "O Thou That Tellest Good Tidings," and she will be associated with Madame Gower-Burus in two duets. Mr. Harold Prescott's

Telest Good Tidings," and she will be associated with Madame Gower-Burns in two duets. Mr. Harold Prescott's fine tenor voice will be heard in "Comfort Ye, My People," and Mr. Bernard Rennell will sing "Why Dottle Nations So Furiously Rage?" Christmas for English people will always be associated with Dickens, who, more than any other writer, expressed the spirit of the English Christmas. Miss Lucy Cowan, the well-known elocutionist, will describe Bob Cratchit's Christmas Dinner, as told in the "Christmas Carol." She will also recite "Christmas Bells" (Longfellow), "Ring Out, Wild Bells" (Tennyson), and "The Donkey" (Chesterton), the last-named being descriptive of Mary's ride to Jerusalem. A pianoforte solo by Miss Warren,

The Trinity Methodist Children's Choir, under Mr. Tolling in his usual able manner. Aftogether, we eshall spend the Trinity Methodist Children's Choir, under Mr. The Trinity Methodist Children's Choir, under Mr. A happy hour.

Mr. Crewes, on December 19 will give choruses, duets, a happy hour.

The Juvenile Choir of the Church of Christ, Rintoul Choir, vocal solos in infinite variety. Among the number Street, is preparing an excellent hour for the 23rd. Carols, are one or two humorous sketches.

Santa Clause has a wonderful workshop, crammed full tide. Uncle Ernest will be away for two weeks, so Uncle of toys for little girls and boys. Uncle Jasper and Auntie Sandy will take he place on the 23rd. The Taylor of Christmas Dot are taking a trip through the air on the 20th, to visit time and good cheer to all!

Santa Clause is breadersting this Christmas. Happy happy Apring this exercing a Before you couldle down by

Even Santa Claus is broadcasting this Christmas. Happy happen during this evening. Before you cuddle down to time, little onest

On December 22 the sweet choristers of St. Paul's will sing a great variety of earels. Uncle Jasper, Aunt Gwen be heard. There are one or two excellent boy sopranos and Aunt Dot will be there to wish you such a Merry Merry among their number, and they are presenting items of great Christmas!

>0—0—0—0—0—0

flute solo by Mr4 W. Hay, and items by the Instrumental Trio will also be

given.
The choir of the Rast Belt Wesley Church will sing the "Hallchijah Chorus" from "The Messiah," and, as a fitting finale to the evening, a number of Christmas carols.

GRAND DOUBLE PROGRAMME.

At 2YA on Christmas Eve the Renshaw and Orpheus Quartets Quartets will be associated in the presentation of a programme well suited to the occasion. There have been many requests for carols to be broadcast on that evening, and the old favourites have been selected,

old favourites have been selected, with a view to pleasing as many listeners as possible.

The Renshaw Quartet will be heard in "Sleep, Holy Babe" and "God Rest You, Merry Gentlemen." The solo numbers will be in lighter vein. Miss Nora Greene will again sing "Billy Boy," a song which proved such an outstanding success when last broadcast by this salented controlly that there have falented contraits that there have been many requests for a repeti-tion. Mrs. Amy Dunn will delight again with "Ave Maria," while hir. Thomas Wood will render "Give Thanks and Sing." Two very popular ballads have been selected by Mr. William Renshaw, "As You Pass By" and "For You Alone"—while with Miss Nora Greene he will sing that beautiful duet from "Judas Maccabeus," "O

Lovely Peace,"
Following on, at 10.30 p.m., the Orpheus Quartet will devote the remainder of the evening to carols. Mr. Len. Barnes has certainly made a most delightful selection.

Special contributors to this double bill will be Miss Violet Wilson, who will be heard in humorous items, and Messrs. Berthold and Bent, who will be "on the air' with their steel guitars.

Christmas Eve at 3YA.

At the Christchurch station the concluding portion of the even-ing's programme will be supplied by the choir of the Trinity Congre-gational Church, under Mr. Fred C. Penfold. The choir will sing

Christmas carols and choruses. A Dickens sketch, that of Scrooge (from "A Christmas Carol," by Charles Dickens), will be given by Miss Naare Hooper, L.T.C.L. This recitation will be illustrated with carols and chimes, and will be a specially attractive item. For the Children's Hour, all the Aunts

and Uncles at 3YA are combining in a happy gathering to send greetings, sing songs, and tell stories to their radio

family.

The rest of the programme will be of a bright and cheerful nature, too. Miss Mabel Thomas and Mr. David McGill, two very popular singers, will be there. Miss Thomas is new to radio, but will be cordially welcomed. Miss Nellie Lowe, one of the most popular contral-

tos in Christehurch, will also be singing. So will the Misses Muriel Johns and Dorothy Johnson, and Mr. Lyndon Christie (saxophone) and Mr. Jack Oxley (zither banjo) will be playing.

CAROLS AND CHORUSES BY CHOIR.

At 1VA on Wednesday there will be a special programme of Christmas music by the Baptist Chorus Choir and Carol Party, and will include solos and carols typical of "Ye Olde Time Waits." The numbers to be contributed will include an organ solo, "A Dream of Christmas," by Ketelby, with vocal and carillon effects, and will be descriptive of a child falling asleep and dreaming of Christmas waits, fairies dancing, the howl of the wolf intermingling with the carols, and concluding with the Christmas morning ringing of bells. Among the carols to be rendered will be, "I Hear Along the Street," "Away in a Manger," "Good King Wencelas," "The First Nowell," and "We Three Kings of Orient Are."

A feature of the programme will be drew's Street Church of C the well-known and popular cantata, The station will close dow "Bethlehem," by Maunder, the soloists o'clock on Christmas Rye.

The Trinity Methodist Children's Choir, under Mr. rolling in his usual able manner. Altogether, we shall spend a happy hour.

The Trinity Methodist Children's Choir, under Mr. rolling in his usual able manner. Altogether, we shall spend a happy hour.

The Trinity Methodist Children's Choir, under Mr. rolling in his usual able manner. Altogether, we shall spend a happy hour.

The Trinity Methodist Children's Choir, under Mr. rolling in his usual able manner. Altogether, we shall spend a happy hour.

The Juvenile Choir of the Church of Christ, Rintoul stands and H. Reynolds, They will be assisted by the Tabernacle Chorus and other items suitable to the festivities of Yule choir of one hundred voices, which is sandy will take he place on the 23rd. Hurrah for Christmas from the 20th, to visit items and good cheer to all!

Chaus. Listen for Santa Claus's voice "over the air."

Christmas Eve—oh, wondrous eve—such great things and the accompanied with the arroll of the choir of one hundred voices, which is the largest church choir in Auckland. Mr. Arthur E. Wilson will be musical director and organist, and the accompanied within a specific of the chorus of Yule. Christmas Eve—oh, wondrous eve—such great things and the accompanied with the accompanied with

4YA CHRISTMAS PROGRAMME.

Saturday night, being Christmas Eve, some appropriate music will be included in 4YA's programme, which will be rendered by a group of the leading artists, among whom is Mr. Arthur Lungley, a baritone of the front rank.

Miss Florence Sumner, L.A.B., another prominent artist, with many con-

er prominent artist, with many successes in recent competitions to her credit, is a mezzo-soprano, who never fails to please her hearers. Her splendid interpretation will be evident in the three numbers she has chosen, two of them, "The Gift" and "The Star of Bethlehem," being typical Christmas songs.

Mrs. C. O. Flamanck, the possessor of an extremely fine voice, will be heard in several songs, including "Come unto Him," from "The Mes-

Mr. Frank Stewart, a lyric tenor of wonderful quality, will make his first appearance before the microphone, and will no doubt be a treat in store for listeners.

Mr. A. Levi (the well known flautist), Mr. George Christie (solo cornetist of the St. Kilda Band), and Mr. A. Wafson (a violinist of the first rank) will be heard in numerous items.

At the conclusion of the concert session, Christmas carols will be sung by members of the choir of the St. Andrew's Street Church of Christ.

The station will close down at eleven

AVING dealt with the main considerations relative to the points to be cbserved in purchasing and getting the best out

of a multi-valve receiver, and the principal accessories accompanying it, the time is opportune for a discussion of the salient factors to be observed in purchasing and running either crystal sets, crystal and valve combinations, or small valve receivers. A discussion of this class of apparatus is of particular consequence at the present time because of the approach of the Christmas season, and of the intense interest which will be centred round radio this year.

A COMMUNITY GIFT.

The many people who are realising that a radio set is a present acceptable to every member of the family, and that a present to each member may be made a community affair by such an investment, will be eagerly scan-ning advertisements and seeking information regarding this new benefit to humanity.

INFORMATION FOR THE PUR-CHASER.

Information for the convenience of and of interest to, prospective pur-chasers and owners of more expensive equipment has been made available in past issues of this column. In consideration of the fact that the majority of folk are not in a position to purchase multi-valve equipments, the crystal and small valve set user will be much in evidence in the radio shops and stores in the next few weeks. Many people have already learnt that broadcast reception is best obtained by using at most a three-valve receiver when situated within, say, 50 to 75 miles of a transmitting station, and by listening solely to that station. When closer in still a crystal and two-valve combination will be quite successful, while within the radius of the city and outer suburban boundaries of the main centres, either a two-valve re-ceiver, crystal, and one-valve, or even a crystal itself. and one-valve, crystal fai, a quite give will respectable signals in a loudspeaker. Of course, all these ranges just quoted refer to loudspeaker reception. The range of any set is very much extended when head telephones are in use, because the energy necessary to fill a loud-speaker with really satisfactory volume will drive as many as twenty or more pairs of telephones. This does not mean that the range of the crystal set is greatly extended when using headphones, because actually the strength of a transmitting station falls very rapidly in terms of distance so far as the crystal reception is con-cerned. Although at three miles from the transmitter a crystal set may work a loudspeaker quite satisfactorily it may only work one pair of telephones at twenty miles.

WORKING OF THE CRYSTAL.

It should be realised that the crystal actually works on power picked up from the transmitter, and is quite dif-

Hints for Christmas Buying

(By M.I.R.E.)

Sound Advice for Prospective Purchasers

ferent to a valve set, which works on power supplied by the local battery, and represents a "relaying" action. The possibility of one day being able to put up a power station capable of transmitting power to be picked up wirelessly has always captivated the imagination of electrical people since the introduction of radio. It is not the introduction of the fell when the transmitted the capable of the capable usually appreciated by folk who have just been introduced to radio in the form of valve sets having (visible) batteries for driving purposes, that actually a transference of energy is taking place between transmitter and regeiver. In the case of the valve receiver the energy actually absorbed out of that picked up by the aerial is infinitesimal, but in the case of the crystal set the actual current which works the head telephones or excelworks the head telephones or speaker is current which has been made available in the receiver, and such energy has been transmitted through

FULL LOUDSPEAKER RECEPTION.

The more energy picked up, pre-suming a given receiver efficiency, the more current will be passed through the sound reproducer, and the louder the signals which will result. It may be said quite definitely that there are contract. that there are only four localities in New Zealand where efficient reception of this nature can be carried out, and that is within two to three miles, at most, of Auckland, Christchurch, and Dunedin stations, and within five miles of Wellington station. As a matter of fact, such a statement is optimistic, because there will be areas where buildings are closely grouped together, and "shading" will take place, and where speaker reception will be quite impossible with any degree of satisfaction. Naturally there will be places outside of those mileages where the desired results will be forthcoming. As has been explained before, there is no rule whereby re-ceiving results may be forecasted, ex-cept with a very approximate degree accuracy

Again, what might be considered fair speaker reception to one person would be impossible to one who has tendencies towards being a "volume Full loudspeaker strength has been defined as equalling a gramo-phone, and any interfering or extraneous noises should not be any more apparent than the needle hiss of a gramophone. A further extension of this definition has been given, that ordinary speaker volume should be sufficient to cause a person chewing peppermints to hear! Weak speaker strength is such that the hearer has to stop eating in order to listen! Very crude, but remarkably to the point, as will be appreciated by users of radio AN IMPORTANT POINT.

Now before passing to the question of design of apparatus it would be of interest to stress a point of definite importance in the operation of sets.

If a speaker is to be operated from a crystal set it should be one of a sensitive type, and the majority of sensitive types are horn types. As a rule the best cone types require a fair volume to drive them, but this does not mean that cone types will be unsuitable. When choosing the speaker do not overlook the fact that the sound reproducer is being purchased and this is equivalent to the sound box of a gramophone. Cheapness is false ecois equivalent to the sound box of a gramophone. Cheapness is false economy. A cheap gramophone may have quite a respectable sound box, but invariably the motor will be cheap and have a limited life. A cheap crystal set is not likely to give trouble and can be easily fixed up if it does,

> BUYRADIO

CHRISTMAS

but a cheap speaker cannot be expected to give satisfactory results, and it is practically impossible to find one which will "fluke" them. Spend three-quarters of your money, or more if necessary, on a good speaker and the balance on crystal set and aerial

CHOICE OF CRYSTAL.

The crystal itself should be of carborundum if the receiver is to drive a peaker. An ordinary crystal quickly burns out" and becomes insensitive speaker. when it is called upon to pass too much current. Galena iron pyrites, etc., are more sensitive than carborun dum, but are not as reliable or long-lasting. Of course a new crystal may be obtained for 2s 6d at the most, and if such a crystal burns out in a few weeks, the cost of crystals throughout the year doesn't add much to the annual amusement bill Nevertheless, a really good carborundum crystal with attached potentionneter and battery costing up to £1 may be considered a good investment because it will be always "on the job" and will last for a year or two anyway.

that the current from the output terminals of the receiver goes successively through each reproducing unit in This connection is in contradistinction to a parallel connection, where all the reproducing units are joined to the receiver terminals and the current divides between them. handy connecting pins or blocks may now be purchased very reasonably from dealers for the purpose of series connecting speakers and headphones.

It is wise to have a switch to either disconnect the aerial from the set, or else put the crystal out of action, while the set is in disuse. With the "catswhisker" type, this wire should be lifted off the crystal, and if the crystal itself is not glass enclosed, but is exposed to the air for dust, etc., to collect on it, it should be covered over.

TYPES OF CRYSTAL SETS.

Crystal sets are mainly designed un-

der four headings.

1. Variometer type. That is the tuning of the aerial to the correct wavelength is achieved by turning a dial which rotates one coil of wire inside another. Such a design is undoubtedly very efficient, and there is little to go wrong providing the rotor has good bearings, and the electrical windings on the rotor are connected by "pig-tails," and not through the hearings themselves, where discontinuities are likely to develop through lubrica-

2. Variable tuning condenser type. In this case a coil having one or two taps going to terminals is usually provided, and tuning is accomplished by a standard tuning condenser. This is an excellent arrangement, and providing the condenser is of a good make no trouble should be experienced. The coil should be wound on a "former," which is not likely to warp with heat.

tion, etc.

8. A Multi-tapped coil and switch. There are very few sets of this design offering, and though no serious quarrel can be picked with them, it may be said that the efficiency is likely to be less than types 1 and 2. Furthermore, the cost of switches is likely to make

ing.
4. Slider type. This is by far the most popular type, because of its simplicity and consequent reasonableness A coil of wire wound "flat" of price. A con or whe would on a round former has a metallic arm traversing its length and picking up indicidual turns in its movement. The individual turns in its movement. The cheapest forms leave the coil and arm exposed, but the more prepossessing When working two loudspeakers or types enclose the whole in a metal or melodrama of the entire fight at more than one pair of telephones always connect them in series, that is to say, they should be so connected ated with respect to the usual pointer. Homes of seven million families.

Providing the ordit has a workmanlike appearence, nothing better should be designed. The movement of the arm should be free, and not feel like a hacksaw. Reject any set which does not come up to these specifications, because it invariably means that the contact on the end of the arm is to sharp, and it is cutting into the wire forming the tuning coil, and not only will it very soon eat through the wire; but while it is doing it, it will file off pieces of metal which will collect set tween the turns of wire and destroy the efficiency of the outfit.

As an introduction to wireless the crystal set is ideal, and the prospect who wants to hear what is going out and get to learn something of this new business, should unhesitatingly spend £5 at least this Christmas, and join are enjoying the excellent programmes the ranks of 30,000 other listeners, who now available.

A POWERFUL JAP

PROPOSED NEW STATION.

The latest news from the East is that Osaka, Japan, is to have a new !! high-powered broadcasting station, con struction of which is planned to start next spring (about next March). Its power is to be 10 kilowatts, or ten times that of the single local station now operating, JOBK, and twice that of the chief Australian stations. This station, and others at Nogoya and Tokio, are all operated by a semi-offi-cial broadcasting monopoly. The new 10-kilowatt transmitter is to be erected 18 miles north-east of Kobe. The new station should be heard with good loudspeaker volume per medium of 4 or 5-valve sets throughout New Zealand. The Japanese evening grammes commence at 10 p.m. Zealand ordinary standard time.

TUNNEY-DEMPSEY FIGHT

SEVEN MILLION FAMILIES LISTEN.

The simultaneous broadcasting of the Tunney-Dempsey fight through a chain of scores of broadcast stations created another boom in radio through-out the United States. The night of the price excessive. Naturally, unless out the United States. The night of the switches are well made, there is the fight broadcast, the streets of all always a possibility of trouble develop- cities and towns were deserted. Ivervthe fight broadcast, the streets of all one who could get near a radio set that night, did so. It is estimated fully half the population of the country stayed home and listened to what has been called the most brilliant and stirring word picture that has yet gone over the air. For sheer sustained suspense, Graham McNamee's interpretation of the fight was unequalled in the annals of the microphone. The sweeping melodrama of the entire fight and the fever pitch of that sensational seventh round were reproduced perfectly in the

MENIWAVE COILS.

Some little time ago, when experiments were first made with short wave sets, our Engineers devised a very ingenious space wound coil, on a thin celluloid material.

Great efficiency was thus secured, yet the coils are very robust indeed. So far, these have been used in our MENIWAVE SHORT WAVE SETS and ADAPTORS, and already they are well known throughout New Zealand.

They can be supplied in lengths for any type of set, and those who build their own sets should ask for quotations.

Meniwave Primary, on base.....15/-Meniwave See, and Tickler....10/-Full Set, Primary and four other coils, 20-500 metres......45/-

MENIWAVE 3 VALVE SET

This set is designed mainly for the long distance short wave transmission, though it will also bring in local broadcasting.

Similar in tuning to the MDNI-WAVE ADAPTOR, it is supplied with broadcasting coils as well as the short wave coils.

Absolutely highest grade.

Price, less Cabinet, &12/15/6

SERVICE.

JOHNS, LTD., build their own sets in the most up-to-date Radio factory in New Zealand.
Every single component is chosen only after thorough test.

That is why we do not hesitate to give full guarantees—which in rare cases of necessity, are promptly and fully honoured without quibbling.

Almost every day we are asked to repair sets—some of them very costly—which only our factory could do. The agents have absolutely no facilities. Sometimes a repair can be made at a price, but at others the cost would be too high to make it worth while.

Run a train over our set—we can repair it.

ALTONA 5 Valve Neutrodyne.

This set is similar to the ALTONA GRAND. It is our most popular set, and is undoubtedly the best set on the market at anything like the price.

Price £16/10/0 Accessories £17

Guarantee: One year.

We are RADIO EXPERTS, and have facilities for giving advice well worth having, in the choice of a set.

Different sets suit different conditions, yet many salesmen offer only one type.

THE SPIRIT OF RADIO.

At this season it is timely to review, however briefly, the spirit of radio and the remarkable progress made in the past year in the popularisation of this modern utility or service. By some it may be regarded merely as an entertainment. Even on that plane it is still a service, and one of no mean moment either. But it cannot seriously be questioned that radio is to be regarded as infinitely more valuable than entertainment. It has its place as a distributor of news, and although regarded jealously in that field by some Press interests who think only of self, and therefore seek to be specially critical of the new force, will unquestionably prove not to be a competitor, but a supplement to a wisely directed Press publicity. In the educational field, represented by school instruction, and the wider field of popular lectures by definite authorities on world topics, a beginning only has been made. The capacity that has been developed in the United States through the linking of chains of broadcast stations, of one thinker addressing simultaneously an audience of millions, creates a staggering conception of the rapidly expanding power of radio. The area and size of that audience is likely to be immediately expanded by the development of the short wave field, by which, as was recently demonstrated in an experimental, but quite successful fashion, a British service and British speakers were heard on short wave and relayed through 3YA Christchurch to a large New Zealand audience.

The spirit that is carrying this marvellous power forward for the benefit of the race is mainly the desire to know, to be "in things," and as such is an expression of man's gregarious instinct. Gratification of that instinct widens knowledge, breaks down the barriers of ignorance, and in itself is, we take it, the best guarantee of the growth of a wide spirit of tolerance, sympathy, and understanding.

What a world is opening to the youth of to-day! Science in every field is throwing fresh knowledge on to the lap of humanity. As a handmaiden in the distribution of that knowledge, radio takes the highest rank. By her charm she is captivating faily fresh thousands and, in this *Christmas season, unique opportunity offers for speading further afield by appropriate gifts that will endure the magic mystery of radio.

To our readers, themselves enthusiasts in broadcasting, we offer the heartiest seasonal greetings, and invite their individual co-operation, in the coming year, in widening more and more the circle of listeners. We have in execution a programme of supplying all farmers in the Dominion, over a period, with sample copies of our journal, to introduce them to radio and its possibility of service to them. As response develops to that programme, we shall feel that we have been of service to our readers and listeners, individually and collectively.

PUBLIC OPINION

BROADCASTERS, LISTENERS AND PRESS

LIGHT BEHIND THE SCENES.

(By D.M.E.)

Let us be fair. That the opinions and desires of the broadcast listeners of New Zealand are, worthy of cousideration by the Radio Broadcasting pany of New Zealand is indisputable. The Broadcasting Company cannot fail to realise that its own prosperity and the general success of broadcasting in the Dominion is inseparable from the the Dominion is inseparable from the desires of the people it serves. But to gauge the opinions and wishes of its patrons is no easy matter for the company. The position is calculated to become more complex and baffling when the opinions and desires of a few obtain wide publicity per medium of the Press Association and daily Press.

As a concrete example let us instance the case of a recent meeting of the Amateur Radio Society of Wellington. At the outset we cannot but commend the enthusiasm and good intentions of the nucleus of its members, who have kept that body alive despite the inex-plicable apathy of the general body of listeners during the four or five years of its existence. Attractive and instructive lecturettes and demonstrations have been given from time to time at the meetings of the society, but despite this, out of a population of some 8000 broadcast listeners in and around Wellington the membership of the society is less than 100 In cold figures this means that at a 100 per cent. attendance of members they represent only one listener out of every eighty resi dent in and around Wellington. No-body could reasonaby caim that such a meeting was duly representative of the Wellington listeners. But the worst has yet to be told. The recent meetof the society, the resolutions from which gained Dominion-wide publicity, was attended by only 24 members, or about one-quarter of the full membership, and, in comparative terms, repre sented one out of every 320 local listeners without any mandate or expression of opinion from the 7976 listen-

ers who were not present.

To stress the matter further, at the said meeting exactly six members took any active part in the discussions or ventured to voice any opinions or wishes. The remainder of those present displayed a docile apathy in the transactions of the meeting; indeed, a pro-portion never troubled to raise their hands for or against the resolutions which were "carried unanimously."

Again, I must emphasise my pathy for the live spirits who are fighting year in and year out to awaken the interest of listeners. They merit more generous support, for it is only through combined effort and interest upon the part of listeners generally that the popularity of the broadcast service can be stimulated.

Indeed, the Broadcasting Company has plainly stated that it welcomes and desires to forward the forma-tion of listeners' leagues and societies.

The executive of the Wellington So ciety is blameless in the matter; the blame actually attaches to the vast body of unattached listeners them-selves.

It is a matter for regret, also, that the New Zealand daily Press generally appears to regard broadcast-ing with more or less antagonism, frequently stressing every com-plaint whether supported by fact or

Possibly the management of some papers fatuously consider broadcasting as a menuce to the Press, but if they were to investigate the relations between the Press and broadcasting in countries abroad they would find that there is a hearty co-operation between these two great servants of the public, with undoubted and trank admittee advantage. Nearer home we find in all the Australian cities a liberal news service broadcast through the co-operation of one of the daily papers in each centre. It has been definitely established that rather than reduce the circulations of the papers concerned broadcasting has increased their sales.

The time is over-ripe for the Broadcasting Company to devise some method of getting into closer touch with listeners, so that a greater measure of satisfaction to the gen-eral body of its patrons can be at-tained. It is up to the company to move now.

In the meantime listeners must not be misled by the cultivated Press dissem-ination of so-called "unanimous" resolutions, which frequently express no-thing but the view of one man and the apathy of a few associates.

CHURCHES **APPROVE** OF BROAD-CASTING

CONFERENCE ACCEPTS SERVICE OFFERED

A conference of representatives of six of the principal denominations met on Tuesday afternoon in the studio at 3YA. The policy of broadcasting church services was approved and a local committee of control was set up.

The Church of England was represented by Ven. Archdeacon Taylor and Rev. C. Fraer; the Methodist Church by the Revs. W. Greenslade, A. Liversedge, and W. H. Speer; the Presbyterians, the Revs. W. Maclean (Oamaru) H. L. D. Webster, T. W. Armour and T. Paterson; the Congregationalists, Rev. D. Gardner Miller; Church of Christ, Rev. Howard Earl; and the Baptists, the Revs. J. Robertson and J. K. Archer (in the chair).

Mr. A. R. Harris, general manager of the Broadcasting Company, was also present.

A motion that the meeting approve of the broadcasting of church services was moved by the Rev. D. Gardner Miller, seconded by the Rev. W. Greenslade, and carried unanimously.

It was reported that the Roman Catholic Church and the Salvation Army had replied that they could not at present take advantage of the offer of facilities to broadcast their ser-The following proposals in respect to

the broadcasting of religious services at its four stations at Auckland, Wellington, Christchurch and Dunedin were placed before the conference by the

1. Every Sunday regular evening church services or special studio services occupying about 11 hours
2. Every Sunday special children's

services from the company's studios for from 30 to 45 minutes prior to the commencement of the church ser-

3. By arrangement, regular Sunday morning church services or special studio services. studio services.

4. By arrangement special Sunday afternoon sessions of approved char-

5. From time to time approved organ and choral music from churches or from the company's studies at the conclusion of the Sunday evening services.

6. From time to time e week-day recitals and church services, organ recitals and choral festivals of acceptable character. This was seconded by the Rev. W

Greenslade and carried unanimously.

A long discussion ensued on the question of the time and place of a service which is being broadcast whether in the studio or the church and whether if in the studio is about the church and whether if in the studio. and whether, if in the studio, it should be during the hours of the ordinary church services or afterwards. This discussion centred round the first pro-

discussion centred round the first proposal of the Broadcasting Co.: "Every Sunday regular evening church services or special studio services occupying about 14 hours."

The following motion by the Rev. J. Robertson, seconded by the Rev. W. H. Speer, was carried, the President of the Studio Services of Special Studio Services be broadcast, the studio Service to be at the regular church hour." The President of t byterians disagreed with the time of the studio service, contending that it should be after the regular service.

The remaining proposals of the company were referred to the committee, A hearty vote of thanks to the general manager of the Broadcasting Co., Mr. A. R. Harris, for convening the conference, and for his courtesy, and a vote of thanks to the Mayor for

presiding, closed the meeting.
In arranging to broadcast Sunday religious services the company has de-cided to give preference to the more prominent denominations that may be broadcast at regular intervals, and for proadcast at regular intervals, and for the purpose of this arrangement the more prominent denominations are deemed to be: 1. Church of England; 2. Presbyterian; 3. Roman Catholic; 4, Methodist; 5. Baptist; 6 Salvation Army; 7. Church of Christ; 8, Con-gregational.

The broadcasting of the services of these denominations will be restricted to the first four Sundays of every month, the fifth Sunday being reserved for special services of other religious bodies or for special services rendered from the company's studios.

The Rev W. Maclean moved: That

a provisional committee he set up to co-operate with the Broadcasting Co., each church to be invited to appoint one representative.

The Wonderful P.M. Filament

That's the Secret of the Mullard Valve!

—the secret of the Mullard's magnificent volume—its majestic power—its pure undistorted reproduction—its extraordinary economy and its all round efficiency. For the P.M. Filament is the greatest improvement in Radio since the valve superseded the crystal.

So tough that it can be tied in knots—even after 1000 hours' use. Result—safety against accidents.

It has up to three times greater length and up to five and a half times greater emission surface than an ordinary filament.

And requires only one-tenth ampere to operate efficiently—a dying match generates more heat than a P.M. Filament—result, low current consumption.

Truly the Mullard is "The Key to perfect and economical radio reception."

There's a Mullard P.M. Valve for every holder in your set.

OBTAINABLE FROM ALL GOOD RADIO DEALERS.

DU/2, 25/- each.

From the Woman's Point of View.

VERITY .-

SANDHILLS

The sand hills stretch for mile on mile Between the sea and land, A mass of gorse and bramble bush, And glistening powdery sand; The grasses bend in silken wave As far as eye can reach, There's a long view of the flat fields, And a long view of the beach.

And all day long the cuckoo calls Amid the hawthorn white, The skylark sings and sings and sings, And when the creeping night Begins to claim the sand hills, The thrush and blackbird cry And a lone thing in the dim fields Sends forth a harsh reply.

And sunset from the sand hills Is a grand breath-taking scene, With a low tide in the far east, And the wet brown sands between; And the great wonderful orange west, With the grey land lying still, And black in the orange the distant trees And the motionless silent mill. -Doris Canham.

The Wearin' o' the Green!

Feminine eyes flamed, hearts fluttered, as the daring, dashing wearer of that bottle-green suit lately strode along our conservative Quay. Immaculately tailored, with nice dark stripes to relieve the monotony, the change from the greys and browns beloved of the male was quite intriguing. Perhaps we shall live to see the scarlet man—so far that being woman's prerogative! being woman's prerogative!

Child Welfare.

It is a sad thing if children must be deprived of the experience of growing up in their own homes. Modern child welfare aims to prevent the child welfare aims to prevent the tragedy, if it is at all possible, though this may involve financial assistance to the family over a period of time.

If the child must be separated from his family the aim is to provide him with something as near like his own home as possible—namely, a carefully chosen and carefully supervised foster If an institution is used at all it should seek through small cottage units and understanding staff to duplicate as far as possible the home atmosphere. Always there is the definite planning for the time when the child will again be a part of a real family circle in the community.

Improvements of child welfare methods are brought about by people "who care"-who care enough to work hard and continuously for the less fortunate children of the land.-Margaret Steel Moss, Assistant-Director Pennsylvania Bureau of Children, U.S.A. From 4YA.

The Letters of Annabel Lee

My Dear Elisabeth,

ти и при температи и при при на прина на прина

The rustle of spring at last, in fact to-day there is an unmistakable scent of summer. And no time at all to bask, for the end-of-the-year turmoil is upon us. Holiday arrangements must be made, entertainment extended to unexpected trippers, a choice made of gifts not too blatantly unsuitable for Aunt Julie, Cousin George and the rest, and the burning question decided as to whom to tip and whom not to tip amid the multitudinous odd-jobbers who burden the financial landscape at this season.

Among the welter of beautiful vanities on view in the shops, and articles of quite meritorious usefulness, there is no excuse whatever for choosing other than wisely and well. If one but had the vulgar and desirable treasure chests of Fortunatus-or was it Ali Baba?-what a gladsome time we could have-and give. For 'tis not the gay and prosperous, but the lost and unhappy, for whom Wellington's brisk and breezy dwellers keep their softest spot and most elastic purse strings,, as witnessed their ready response last Friday to the cry of the children, the kindly and efficient cadgers raking in many shekels for St. Mary's Home, Karori, the Boys' Home at the Hutt, and Fielden Taylor's Babies.

For the right gift for your man, or anyone' else's, choose one of the delightful collar-boxes of British Xylouite, that is made to resemble so closely the rare and expensive tortoise-shell. Also is it to be had in manicure-sets, hand-glasses, and other oddments for the dressingtable, procurable for a quite modest sum, and almost as attractive to the eye as the real thing, and so to be treasured, for are not most things judged by their appearance, the outside of the platter? Aren't we all, in fact? Particularly "us girls"!

If Gerald, or Geoffrey, or Jonathan l is a "literary gent" (like Silas Wegg)

why not try the effect on him of the -or perchance the reverse! narrative of turbulent seas and a far Milne playlet, "The Boy Comes country, written by that poor old Home" will be diverting; extremely man and great traveller, Aloysius interesting also the tragic, most Horn. These strange episodes of poignant "Riders to the Sea," by adventure and daring, fished up by J. M. Synge; while Mr. Charles kind and clever Mrs. Ethelreda Lewis Allen's "Posterity" is looked forward from the mazes and memories of the to with keen interest by those who mind of a dilapidated vendor of tin- have in mind the wit and glamour of ware, make singularly absorbing reading, although perhaps not the taste of the devotees of the "pashpash" school of fiction. Among our merchants and magnates, lawyers and litterateurs, butchers and bakers and candlestick-makers, there are those who resent the rut, in whose blood runs a persistent strain of the Viking, calling to adventure and the high seas, and to them I commend these marvellous tales of the Ivory

Dunedin has lately welcomed back to its heart several once-upon-a-time boys and girls who lived in the same parish, almost in the same street, and now are citizens of that wider world towards which some of us turn wistful eyes. Among them is Mr. C. R. Allen, novelist and playwright, to the quality of whose literary achievement our lethargic Dominion is just beginning to wake up; Mrs. Elmore, whose pastel pictures remain in the memory for fidelity of portraiture, flawless technique and poetic colour; and Captain J. Ritchie (lately in command of the "Dunedin"), back on furlough at his old home, before leaving for England, and eventually Washington where he has been appointed naval attache to the British Embassy.

Several new "masks and faces" are to appear at the imminent performance at Wellington of the National Repertory Society. Which is all to the good, as some slight feeling of resentment exists because certain members of the Society so far have had none of the limelight, no opportunity of making their mark, toeing the line, and (in the vernacular) paddling away with the peanut

his work.

унивания переприничения по приничения принич

This is the Glass Age, and lately I beheld roses and lillies, quite large ones, fashioned of this perishable substance, with waving petals, long, long stems, stamens and pistil and all complete, shining and shimmering like running water, and of a cleverness and beauty quite miraculous. These I left for the lucky possessor of a mahogany table like yours; and instead purchased needlework posies and peacocks and other feather fowl of brilliant colour and weird origin, these being quite new and extremely up-to-date, the parrots in particular.

For a short vacation, smart black, shiny, flat hat-bags are to be had for 25/-, and easily manipulated in that last-minute rush up the gangway. The little journey of to-day is so much simpler than of yore, when unattached women viewed with trepidation the prospect of luggage and locomotion. Now clothes, seen and unseen, are silken and scanty, hats small and easily housed, taxis within the reach of all, and the age of chivalry no more dead than ever it was. Particularly do I commend the daylight trip to Lyttelton organised by the much maligned and indispensabl Union Company. More exhiliarating and interesting than the dark and dismal all-night passage, and enjoyable even to one who prefers to remain in city pent rather than venture forth in any boat whatever on the waters of Babylon, or Cook Strait, or even the Styx! Except, perhaps, round and about that solitary, lovely island yclept Stewart, where little trips in a cutter remain long in remembrance, when the boat rushed along in the tumbling water almost turning over on its side, salt wind and spray in our faces, while above and around circled the graceful gulls in a crystalline light that flooded the sea and the shore of the world. Of some such hour must Robert Louis Stevenson have been thinking when he wrote-

Give me again all that was there, Give me the sun that shone! Give me the eyes, give me the soul, Give me the lad that's gone.

ANNABEL LEE

HIS GARDEN

My lover lights the world for me, His eyes are dawn upon the sea, His smile the sun;

The sun that maketh all things grow, Sweet seeds that time has helped grief sow.

One after one, Within my heart, that garden space Lit by his face.

Grow, seeds, and come to fruit and flower!
O haste the hour

When he shall bluck from each small

Flowers for his joy, fruit for his need.

-Mary Carolyn Davies. · 18

From a Cynic's Cyclopaedia.

Athlete: A fellow who is not strong enough to work.

Baronet: A man who has ceased to be a gentleman, but has fallen short of becoming a nobleman. Cannibal: A person who is honest in

his love for his fellow men. Evidence: The same facts differently to suit the different detail-

Mincemeat.

1½lb. chopped apples, 1lb. beef suet, 1lb. stoned raisins, ½ nutmeg (grated), 1lb. currants, 1lb. sugar, 1lb. stoned dates. 1lb. sultanas, rind and juice of 1 lemon, ½lb. mixed candied peel, rind and juice of 1 orange, 4oz. almonds, 1 to 1-pint brandy.

Method.—Put the chopped or shred-ded suct, apples and sugar into a bowl, add the stoned and chopped raisins, minced dates, cleaned currants, sultanas, chopped peel, blanched and chopped almonds, grated nutmes, chopped almonds, grated nutmeg, lemon and orange rind, strain in lemon and orange jnice, and add brandy. Place in jars and keep air-tight.—Miss M. Christian. 2YA.

Strawberry Short Cake. 11b. flour, 1/2 lb. butter, 20z. caster

ngar, strawberries, cream. Rub butter into flour, mix in the sugar, beat eggs and stir into the other ingredients. Mix all together into a paste, turn it out on to a floured board and knead until it no longer clings to the hand. Roll it into a rather thick round, and bake in a moderate oven a light brown. Take the stalks off some strawberries, mash them with a fork, sweeten to taste. When the pastry is done, let it cool, then split it in half, cover the lower half thickly with the strawberries, put the upper half of the pastry upon them, cover the top with more of the strawberries, whip some cream, and cover over with it.—

Miss M. Christian. 2YA.

Mr. America. An American dry goods store proprietor (retired) was doing England. He was with a party visiting a house in which Milton once lived. The guide was enthusing: "This house was occupied by Milton. On this seat Mil cupied by Milton. On this seat Milton sat." The American went over and kissed the seat reverently. The guide went on: "Here Milton wrote 'Paradise Lost," Then the American an interrupted: "Say, who dyon say lived here?" "Milton." "Oh!" was the rather disgusted reply, "I thought you said Lipton"

4YA AT ITS BEST

PROGRAMME ORGANISA-TION

DUNEDIN'S BEST TALENT ENGAGED.

An important departure has just been made in regard to the programme organisation at 4YA. This station has now been brought into line with the other three, and engagements have been entered into with many of the leading artists in the southern city to appear regularly before the microphone. Dunedin can boast of many fine singers, and listeners will in fut-ure be able to rely on hearing the best that can be secured for radio. The concerts will be of a high standard of merit, and Dunedin will be able to demonstrate to the rest of New Zealand what a wealth of brilliant artists it

In future Tuesday night will be the bend night in Dunedin. The two leading brass bands, the St. Kilda and the Kaikorai, both well-known throughout the Dominion, will be heard each week alternately, with fine popular programmes interspersed with vocal and elocutionary items.

4YA broadcasts on five evenings and two afternoons each week, and all the more important, sporting fixtures are relayed.

On Sunday, at 5.45 p.m., "Big Brother Bill," who is the darling of thousands of kiddies, will conduct the children's song service, when he will be assisted by little folks of the Anglican Sunday Schools. They will sing wellknown bymns.

Following the relay of the service from the Methodist Central Mission, the St. Kilda Band will, if the weather is fair, give another Sunday concert performance at its seaside rotunda. This will also be broadcast. A fine performance may be expected, for the band is in excellent form for the forthcoming contest.

On Tuesday evening the Kaikorai Band, under Bandmaster E. Franklin, has arranged a most interesting programme of popular items. Five of gramme of popular items. Five of Dunedin's foremost artists will assist-Miss Anita Winkel (the well-known elocutionist), Mr. R. Wilson Brown (a versatile comedian), Mr. J. B. McConnell (humorous monologues and a recitation), Mr .Alfred Walmsley (one of New Zealand's finest tenors), and Mr. Reg. Richards (a leading young baritone in Dunedin).

FACTS?

B. SCOTT LTD.

Streets, Christchurch.

Send for Lists.

Thursday's programme at 4YA will be of high order. For that even-mg's entertainment more of Dunedin's leading talent has been engaged,. Miss Rita Holmes (the favourite soprano), Miss Winnie McPeak (a contralto of outstanding ability, and a possessor of a beautiful broadcasting voice), Mr. Fred M. Tuohy (a fine operatic baritone), Mr. E. G. Bond (well-known to listeners for his magnificent bass rendering), will be sing-

At Thursday's concert music will be played by Miss Alice Wilson, planiste, one of the few young ladies who have attained F.T.C.L. tetters. Miss Wilson's choice for this programme comprises works by Liszi, John Ireland, and Palm-gren. Mr. Malcolm Robilliard, gren. Mr. Malcolm Robilliard, Dunedin's leading 'cellist, will play, in his usual artistic style, Saint Saens's beautiful solo from "Samson and Delitah," "Softly "Samson and Delitah," "Softly Awakes My Heart," and other numbers.

To lend a lighter touch to the programme, on Tuesday Pastor W. D. More will deliver a lumorous address at 8.45 p.m.

Big Brother Bill will be on the air Big Brother Bill will be on the air on Tuesday and on Friday at 6 o'clock. There will be plenty of joy for the little folks. Big Brother wants all little listeners to learn and join in the "Happy Ditty" entitled "Let's All Sing," which goes to the tune of "Three Blind Mice":—

Let's all sing; let's all sing. Make the rafters ring; make the rafters ring.

We don't care whether it rains or snows, or whether the old clock stops or goes.

There's nothing in worrying, goodness knows; So let's all sing.

Mr. Les. Dailey, the people's favourite tenor, and the most successful com-petitor in the recent competitions, will be singing on Friday evening. Mr. Dalley has chosen three of the older numbers, including the charming old "Mary of Argyle."

Miss Roma Buss (soprano) and Miss Mollie Andrews (mezzo-soprano), two of the best-known and most pleasing young artists, will also be on the pro-gramme on Friday.

Mr. J. B. Macpherson, possessor of a most delightful bass voice, is another acquisition to Friday's pro-His numbers will be three gramme. His numbers will be three of A. A. Milne's charming verses, set to music by Fraser Simson.

Miss Sheila Neilson, one of Dun-ediu's foremost elocutionists, will en-tertain with monologues and recitations, both serious and humorous, on Friday night.

NOTES FROM 1YA

The programme for Tuesday evening at 1YA will take the form of a drawing-room entertainment, performed by the Orpheus Quartet, assisted by Mr. Eustace Tregilgas (cornetist) and Mr. Eustace Tregilgas (cornetist) and Mr. V Bedford (flautist). This programme, which was unfortunately postponed some weeks ago, owing to unforeseen circumstances, should prove of an entertaining and novel character, including as it does several orchestral relays by the Majestic New Orchestra, under the direction of Mr. J. Whiteford-Wangh.

Miss Ina Thompson (contratto), Mrs. B. Jellard (mezzo soprano), Mr. Morris Schroeder, Mr. Will. Harris (tenor),

Schroeder, Mr. Will. Harris (tenor), and Mr. Reg. Thompson (light bartone) will be contributing to IYA's protone) will be contributing to IYA's programme on Thursday evening. In addition to these fine singers, Master David Campbell, the popular boy soprano, will be heard, and Mr. Norman Watson, violinist, will play.

Miss Gladys Gamman, the well-known elecutionist, will recite several humorous numbers at IYA on Thursday.

MISS MARY TAYLOR. A singer from the English Midlands. Her fine contralto voice is frequently heard at 3YA.

On Friday night at 1YA a number of the items—songs, instrumental, and elocutionary—will be appropriate to the Christmas season. Miss Edna Peace, a very popular contraito, Mr. James de Moutaik (bass baritone), Mr. Laurie Stuart (baritone), and Mr. Peter Dawson (elecutionist), Miss. Phyllis Best (violinist), and Mr. Reg. Davies (corrietist) are the artists who will provide the programme, along with lngall's Hawaiian instrumentalists.

Saturday evening's concert will be supplied by the Municipal Band; under Mr. Christopher Smith, after which there will be a relay of dance music from the Click Clack Cabaret.

· Following the relay of the church service from St. Andrew's Church, where the preacher will be the Rev. Lamb Harvey, the municipal organ recital by Mr. Manghan Barnett will be

JOTTINGS FROM 2YA

SYMONS-ELLWOOD-SHORT TRIO.

A trio by Reissiger, played recently, evoked considerable appreciative notice by reason of its simple rhythm and pure melodiousness. The one in D pure melodiousness. The one in D minor will prove a rival in the affections of listeners-in to the effective one in G played recently. Lovers of tune should listen particularly for the haunt-

The happy Schubert never fails to bring musical sunshine into the concert The delightful third movement of the second trio in E flat, and the light-hearted last movement, suggestive of a hunting song, will win many hearts.

It is always refreshing to a lover of music to return to the simple melodic thought and clearness of ideas of

CANCER ON THE LIP AND TONGUE

IS ON THE INCREASE.
So says Wm. J. Mayne,
Surgeon, Rochester, who attributes the cause to the habit

of smoking. Smokers be warned before it is too late. It is so easy to stop smoking. ANTI-BACO is a thoroughly effective remedy, absolutely harmless. ANTI-BACO takes away the craving and rebuilds the system already damaged

by Nicotine Poison.

Write to-day for descriptive booklet and wonderful. testimonials.

Home Welfare Proprietary 4J WILLIS ST., WELLINGTON. Haydn. To listen to the pure melody of his tries is like drinking a glass of clearest spring water. A number of these works will be played during the coming months. .

The slow movement and the gay, bustling scherzo of the second trio by Mendelssohn will also be performed. Like Schuhert, Mendelssohn makes an immediate appeal through the absence of any complexity in his musical ideas.

OTHER FEATURES.

Mrs. J. W. Bailey, who will be "on the air" at 2YA on December 23, is the passessor of a sweet, clear, lyric soprano voice. Having made a special study of the idiosyncrasies and mannerisms of children, it is but natural that as a child impersonator she should have established herself as a great favourite with both the public

Mrs Bailey specialises in character work. He has an exceptional speaking voice, covering a range of two octaves, described in London as being one of the finest voices heard on the stage. Together, Mr. and Mrs. Bailey have given recitals in many parts of the world. Five years ago Mr. and Mrs. Bailey opened a school of dramatic art in Wanganui, and since that time their students have gained twenty championships, seven scholarships, and hundreds of prizes in competitions in and beyond Wangamii.

The Melodie Four Male Quartet, which has already been heard from the studio of 2VA, will again be broad-cast from December 19. The items for Monday evening have been selected with a view to providing variety. The approach of Christmas is the reason for the inclusion of a traditional Christmas carol, "Good King Wenceslas," which will be sung by the Melodie Four with the assistance of Master Brown, who is the possessor of a pleasing soprano voice. In lighter vein, the quartet will be heard in "Old Man Moses," a story of a street flower seller, whose mose "was as red as the roses,"

Supplementing the Melodic Four and the Symons-Ethwood-Short Trio, Mr. Temple White, at the organ, will give listeners twenty minutes with Handel. His recital will commence with the "Cuckoa and Nightingale" concerto, and conclude wift the immortal "Hallelujah Chorus."

The programme to be presented at 2VA on Thursday, December 22, by the popular harmonisers, the Lyric Quartet, will be another of the type that has made these four such great favourites with all listeners.

The solo items have been chosen to fit in with the festive season, and several of them will remind us that Christmas is near. , Harry Phipps will be heard to advantage in that beloved song of Stephen Adams's "Star of Bethlehem," while the bass voice of Mr. W. Binet Brown is eminently suited to the singing of Gounod's great song "Nazareth." As this is the season when most families gather together, the singing of "Coming Home." by Mr. Will Coudie should strike a sympathetic chord, On the evening of Tuesday, December 20, the popular combination will lead off with "All in a Garden Fair," a melodious quartet, the words of which are 1t7h century, the music from an old English song of 1565, harmonised and arranged, with a refrain composed by Francis.

Another quartet, appropriate to the season, will be "The Three Ships," a Christmas song which was composed by Colin Taylor for the Efon College Musical Society, Christmas, 1909. The poem is based on the old legend of the three ships conveying gold, frankircense, and myrrh.

A pleasing touch of variety will be afforded by the Canadian river folk song, "The Canadian Boat," in which the four voices blend delightfully. 2YA LECTURETTES.

"Politics—the Humour of It." will be Mr. Chas. E. Wheeler's thome on Thursday evening. It would be difficult to find in the Dominion anyone more competent to deal with this subject than is this bright and entertaining speak-er, whose previous efforts from 2YA have been so widely appreciated.

On Monday evening, Captain Hugo inspector of New Zealand Fire Brigades, will deliver another of his instructive locatrettes on fire peril and preven-

On Tuesday Mr. A. J. Dry will com-mence a series of talks on "The Whal-ing Stations of New Zealand, Past and Present"—a topic with a dual flavour-ing, historical and adventurous.

3YA NOTES

The Beckenham Male Quartet (Messrs. W. H. Odell, K. G. Archer, R. Pitman, and F. Jackson) will be singing on Monday. This combination has been in existence for some time, and all members sing extremely well together, so that their appearance at SYA on Monday will be looked forward as the band engaged for that evening is that of the 1st Canterbury Regiment, under Lieut. Hoskin, the whole evening's programme should be of a most entertaining nature.

Wednesday marks the first appearsuce of the quartet consisting of Misses Lilian Hanham and Alice Vinsen, and Messrs. F. C. Penfold and D. Suckling. who will sing solos as well as concerted items. A veritable feast of music is in store for all who listen in. Delightful quartets will be "Kathleen Mayour-neen" and "O Peaceful Night." Duets will be sung by the lady members of the party, and by the gentlemen. These will be a sheer delight to all, as also will the solos, for each member of the party is a vocal artist.

Fine instrumental items are on Wednesday's programme for 8YA. These include selections by an orchestra under Mr. Harold Beck, and clarionet solos by Mr. Munday.

"The Real Me" is the title of an interesting talk which will be given on Friday by Mr. James Stout, president of the Christ-church Practical Psychology Club.

NOTES AND COMMENTS (By "Switch,")

A recent broadcast by 5CL, Adelaide, was carried out from the Cave Gardens in Mt. Gambier. This town is in a unique position as regards drainage, At the rear of the Town Hall is situated a large open cave into which all the streets are drained. After heavy rains thousands of gallons of water are pour-ed into the cave and drain away im-mediately. Up to the present no one has been able to determine where the caves lead to.

It is a good plan to use some sort of condenser and choke unit for the londspeaker when more than 96 volts "B" battery is used for the last audio This londspeaker unit is designed to be used as a filter to keep the high current required in the plate circuit of power tubes out of the windings of the speaker. It not only protects the speaker from excessive high current flow, but improves the quality of reproduction because the constant D.C. strain is entirely eliminated from the speaker windings.

A cable message recently reported that a two-way radio telephone service is now established between Holland and Java. It is now reported that the Java station operates on 40.1 metres. Short-wave set owners may pick up the conversation, but as it is probably in Dutch, it is not likely to prove in-teresting to New Zealanders generally unless an interpreter is at hand.

MR. H. E. BRUSEY

Mr. H. E. Brusey, organist and pianist, who came to Wellington from Napier, received his musical training in the Mother Country. While in Napier he conducted the Operatio Society, and was accompanist for the Choral Society, and won the championship for piano playing at the Gisborne Competitions. Mr. Brusey has for some two years been organist for The Terrace Congregational Church, and his broadcast recitals from that church have made him well known to listeners to 2YA. He will be at the organ on the evening of Saturday, 17th inst., when "The Messiah" will be broadcast from The Terrace Congregational Church,

In Italy no servicing is given free by the radio dealers, except for defec-tive sets, and even so there are still a great many cleap sets sold without guarantee in the smaller communities. Reliable dealers make repairs at cost, charging for labour and materials. One interesting advertisement in a radio paper offers, to those whose sets are in trouble, advice by mail for 2s. and verbally for 1s.

-S. P. Andrew, photo.

Most radio novices do not understand the abbreviations "R.F." and "A.F." which are so commonly employed. R.F. is the abbreviation for radio-fre-R.F. is the abbreviation for radio-frequency, which is any frequency (or vibration) in the radio range, i.e., 10,000 to 39,000,000 cycles per second or 10 to 30,000 kilocycles per second. A.F. signifies audio-frequency, which is any frequency in the audible range, i.e., below 10,000 cycles per second. A.F. signals (sounds) can be heard by the unaided human eart but R.F. signals signas (sounds) can be neard by the unaided human ear; but R.F. signals must first be rectified, or "detected," by an audion (vacuum valve), or crystal detector, and then made audible by head phones or a loud speaker before they are the heard. fore they can be heard.

"Live-wire" methods characterise the American radio business. A Yankee dealer recently stated:—"We have a rule in operating our radio store which has been a big help to us in getting more business. This is to try to sell something to each old customer at least once each six months. We make these sales efforts by means of letters to the old customers, phone calls and personal calls."

The management of 2BL, Sydney, has just engaged Mr. Jack Cannot, the well-known comedian, as announcer and bed-time story-teller. Mr. Cannot will be widely remembered in New Zepland as pantomime "dame" and Zenland as pantomine "dame" and musical comedy comedian under Mr. J. C. Williamson aegis. His favourite pastine is surf-swimming, and "Switch" was in his company on frequent occasions in years gone by.

4YA DUNEDIN (463 METRES) - MONDAY, DECEMBER 19. SILENT DAY.

Tuesday, December 20th

1YA AUCKLAND (333 METRES)-TUESDAY, DECEMBER 20.

3 p.m.: Afternoon session-Selected Studio items. 4.0: Literary selection by Mr. Culford Bell. 4.30: Close down.

6 to 7: Special announcement—On this evening a relay of part of the performance of "Carmen" in His Majesty's Theatre by Madame Irene Ainsley and a cast of 60 will be given. Some variations in the following programme will, therefore, be necessary.

8.1: Relay of orchestral overture from Majestic Theatre Orchestra, under Some variations in the

the direction of Mr. J. Whiteford-Waugh.

8.11: We will now pass over to the drawing-room of Mr. Duncan Black, who is just receiving his guests, including Miss Elsie Bentley, Miss Beryl Smith, Mrs. Bentley, and Mr. James Simpson, Mr. Eustace Tregilgas, and Mr. and Mrs. Bedford.

and Mr. and Mrs. Bedford.

8.13: The guests having settled themselves comfortably in the drawing-room, Mr. Black, as host, opens the proceedings by asking the company to sing an opening chorus.

8.18: He then asks Miss Smith to sing, as a particular favour, the contratto solo, "My Ships" (Barrett).

8.23: Mr. Simpson, a pushing young tenor, then sings, "A Farewell" (Liddle).

8.27. A few jokes, cracked by mine host, who then invites Mr. Tregilgas to play "Silver Threads Among the Gold" (Rimmer) on his cornet.

8.32: Miss Bentley then favours the company with a soprano solo, "There's a Land" (Allitsen).

8.36: We now pass back to the Studio to relav a musical interlude from the

8.36: We now pass back to the Studio to relay a musical interlude from the

Majestic Theatre.

8.46: Returning to the drawing-room, we find the company calling on the host, and Mr. Black digs into the antique music stool and producese "Dreaming of Home" (Bisley);

8.51: And then combines with Mr. Simpson in a delightful little duet.

8.56: Not to be outdone, Miss Bentley and Miss Smith get together, and sing

"Island of the Purple Sea" (Gheel).
9.0: Mr. Bedford now produces his flute, and plays "Grand Fantasia" ("Il Trovatore), (Verdi).

Mohammedan priests in Svanetia, Caucasus Mountains, look upon wire-less as a "spirit speaker." A receiving less as a "spirit speaker." A receiving set was recently publicly damned, and then thrown down the mountain side.

A cone loud-speaker of large dimensions is nunecessary provided the small cone is properly designed and assembled and it is possible to get just as much from a cone eight inches in diameter as it is from one several feet in diameter provided a good set is used and the power is applied at the correct point In fact the smaller cones lend themselves much more readily to household use and may be operated with all musical fidelity without the least difficulty. Low tones and high tones will all be present without exage gerated overemphasis on the low tones which at one time reached the proportions of a fad in radio but has since passed on in favour of real music.

A novel place for a family receiving set is on the Union Company's coal "transport," Ilma, which is generally lying alongside the Railway wharf at Wellington. The keeper has run an aerial from the top of the huge steel tower on the vessel down to a small mast just above his family's living quarters. The Ilma is equipped with huge grabs worked by powerful winches for picking up coal from one vessel and unloading it into another. She has no proceeding good heing worked has no propelling gear, being moved like a coal hulk from one berth to an-

certainly have a real thrill coming to you when you listen to the remarkable broadcasting from the short wave stations in Britain, Holland, America and Russia.

Let us—without cost to you—tell you how you can easily and quickly, at surprisingly low cost, assemble your own SHORT WAVE RE-CEIVER (or an Adaptor for your present set) with the new SILVER-MARSHALL SHORT WAVE KIT.

BOND and BOND Ltd., Auckland

N.Z. Agents for Silver-Marshall,

Mr. W. Dick, musical director of 2BL, Sydney, says that among recent callers at the studio were a middle-aged lady and her husband. The lady was from New Zealand, had sung from one of the stations there, was in Sydney for a week, and wished to broadcast in order to let New Zealand hear her. More surprises, when she learnt that our programmes are prepared a month in advance.

A radio trader in Connecticut, U.S.A. says:—"We find that the majority of radio fans in our territory like to hear band music and we 'cash in' on this situation with good 'results by placing signs in our show windows each week telling what stations will have band music during the week and just when such music can be heard."

The attractions both commercial and pleasant of many country towns and districts are dealt with on two evenings each week by 3AR, Melbourne, in papers brightly and pithily written by the editor of the newspaper associated with the particular town being "broad-cast." Already the numerous enquircast." Aiready the numerous enqui-ies from metropolitan dwellers auxious to change dead-end jobs in the city for the more spacious life in the coun-try show clearly the great influence for good to which radio news, proper-ty handled may ever! ly handled, may exert.

The foreman carpenter on a Sycuey The foreman carpenter on a Sydney building has brought his crystal set to work, having hung an aerial off the flagpole of the building. He has no loudspeaker, but in the lunch hour performs the function of that instrument himself for the edification of his work thates. work mates. The latter enjoy it so well that they are talking of clubbing together to buy a valve set with speaker.

New York "Radio Retailing" says:
"That the industry is groping toward
perfection in engineering principles,
cabinet design and in many other
ways, is decidedly noticeable. Receivers and speakers, particularly, this
year, are designed with a greater eye
value than in the past. And the quality of reproduction has advanced by
leaps and bounds. Sets have three
distinct selling points this year—engineering perfection, external beauty,
exquisite tone."

A New Zealander listener advises the "Radio Record" that he obtains loudspeaker reception (in Masterton) of KFKB, Milford, Kansas, U.S.A., on 2418 matrix, units 1500 miles. of KFKB. Milford, Kansas, C.S. 241.8 metres, using 1500 watts power. Strangely enough, this is the same wave-length as that of KFON, Longbeach, California. "Switch" would beach, California. "Switch" would like to hear from those listeners who have picked up KFKB, Milford, Kau-

A New Zealand listener, who believed he had picked up KRC, Shanghai. China, has been advised by the Kellogg Switchboard and Supply Company, owners of the station, that it operates on a wave-length of 338 metres, and that the power input into the aerial is only 150 waits. It appears that KRC was not putting on the type of programme reported by the New Zen-

Au interesting romance has developand interesting formatice has develop-ed from the recent broadcasting by 3LO, Melbourne, of the Sunday school anniversary service from the Pleasant Street Methodist Church, Ballarat. During the sermon the preacher re-ferred to the presence of one of the senior members of the church. Away in Mordialloc an old sweetheart heard the name, and entered into corresponlade the result that they have been quictly married at Ballarat, where they have made their home.

Normally "C" batteries should read 3 and 4½, or 1½, 3, 4½, 6, and 7½ volts, depending on which type you have. Test yours with a meter toward the end of an evening's entertainment, noting the voltage you should get, from the voltage printed beside each terminal on the container. If it has fallen to 8½ volts, when it should be fallen to 8½ volts, when it should be 4½, get a new battery.

Sometimes when a loud-speaker is placed on top of a radio receiving set the vibrations from the loudspeaker cause the internal elements of the detector valve to vibrate in sympathy and a kind of howl or whistle will be heard. In this event the loudspeaker should be placed away from the set some sets will howl even when loudspeaker is pointed towards it. The obvious cure is to turn the mouth of the loudspeaker away from the set.

Radio salesmanship is an art in America. One big trader says:—"The only way in which the handling of radio can be made a success is by having salesmen who know and understand it, and a service department that can render prompt and efficient ser-vice. In our radio department we have two expert radio men who know it in and out, up and down, and one of these is always on the floor where he can be consulted by the other salesmen or the customer whenever neces-sary. Then we hold a 'school' for our entire staff of salesmen once each week when talks are given by one of the radio experts or perhaps a representative of some radio house who happens to be in the city. In this way every man-and woman-gets a good work ing knowledge of radio and can sell it whenever it becomes necessary."

8 15: Baritone solo—Mr. Bernard Rennell, "Sombre Woods" (Lully).

Quartets—The William Renshaw Quartet, (a) "Good Christian Men,

Rejoice" (Neale); (b) "God Rest You, Merry Gentlemen" (traditional).

ROUGH ON LIGHTS

DIFFICULTY AT 4QG.

Persons who have cause to visit 4QG, Brisbane, notice that quite often one or more of the lights in the studios, reception hall or station are not alight. Although this might at first appear to be the result of carelessness on the part of those responsible in not replacing burnt-out lamps, the trouble is not this at all.

As a matter of fact, special care is taken in this respect, and almost every day a new light goes on somewhere. The trouble is that the dissipated en-ergy from the 5000 watt transmitter is so great that the lamps all glow to a certain degree irrespective of whether they are switched on or not, the consequence being that when the power is supplied to them in the usual way, more energy is passing through the filament than they are designed for. The lamps do not, therefore, stand up for any length of time under the overload.

MYSTERIOUS ETHER

INVISIBLE, BUT EVERYWHERE.

Scientists postulate the theory that radio waves, like light waves, travel through a medium other than our at-mosphere. They term this mysterious medium "ether." They say it is an medium "ether." They say it is an imperceptible medium which pervades imperceptible medium which pervades all space and matter. It is possible to liken it to a jelly in a jar, which, when shaken, vibrates the jelly in unison with the vibrating source. The above jelly analogy may be extended by placing a wire in the jelly and vibrating it, causing the jelly in its immediate vicinity, by reason of friction, to vibrate in sympathy with it. As a matter of fact, no energy in the true sense leaves the transmitter aerial, although two effects are caused in the though two effects are caused in the medium surrounding it, namely, ver-tically and horizontally polarised "waves," otherwise called the magnetic and static fields.

LENZ'S LAW.

If Lenz's law is now used we see how these magnetic lines of force cut a conductor (the magnetic field cutting the stationary receiver aerial as it passes with the speed of light), and as a result causes current flow if it is closed circuit, this latter is not applicable, as the aerial circuit is most usually an open oscillator, but a voltage is impressed on it, which in turn charges the grid of the valve of the re-ceiving set either positively or negu-

RADIO IN ITALY

METHOD OF TAXATION.

In Italy there is a Government tax of about Is. 3d. on the sale of a crystal set, about 7s. 6d. on a valve set, 5s. or a loudspeaker and 1s. 3d. on each valve. The official subscribers to the broadcasting service number about 30,-000, but the owners of sets in Italy who are listening in to the programmes are probably more than double than number. This building of unlicensed sets has proved to be an important factor in keeping up the demand for radio parts which still radio winch form the bulk of the business—about 75 per cent. according to the estimate of one radio wholesaler. Where sets are purchased, those not requiring aer-ials are popular because they do not advertise their presence to the Govern-ment collector. The license fee is about 2s, per month. Broadcasting is conducted by a private company which receives a percentage of the taxes on radio collected by the Italian Govern-

WORLD BROADCASTING

Comprehensive arrangements world broadcasting on a scale hitherto unattempted have been completed by

A weekly programme will be broadcast by the big Australian station on a wave-length of 36 metres. The service was inaugurated on November 21, at a.m., and will be continued every Monday morning between 4.30 and 6.30 a.m. Melbourne time (corresponding to 7 a.m. and 9 a.m., New Zealand time, and 18.30 and 20.30 Greenwich mean-time every Sunday), slight variations possibly being necessary from time to time to meet changing circum-

It should be practicable by continu-

It should be practicable by continuous testing to perfect short-wave transmitting to such a degree that world broadcasting will become possible with satisfactory results.

Reports have already been received by 8LO from various parts of Great Britain, U.S.A., Alaska, Japan, China, India, Java, and the Pacific Isles commenting very favourably upon the recention of the short-wave service, and ception of the short-wave service, and it is hoped that each weekly effort will result not only in improved transmission, but in better reception conse-quent upon continued short-wave ex-periments by listeners throughout the 8.10: Steel guitar duo—Berthold and Bent, (a) "Laughing Rag" (Skinner);

THE "R.R." POCKET CRYSTAL SET

COMPACT AND USEFUL RECEIVER EASILY MADE AT SMALL COST

for regular use in broadcast reception at home. On actual test at short range there is little to choose between this set and its brother, the "Record" crys-

The frame is constructed entirely of strips of rimu one inch wide and fin. thick. All dimensions are shown in the diagrams. Two of the side pieces have a large hole drilled near one end. To avoid splitting, these holes should be drilled before the strips are cut to length, so that after marking out the drilling of these holes would be the first operation.

The position of the detector calls for care in fitting, but in this position it is well protected. A carborundum or semi-permanent can be fitted somewhat his shown, and is the best for the purpose, but if a cat's whisker type is preferred the constructor will easily devise a way of adapting it.

The solencid, of square shape, is funed by means of a springy brass (22's) slider running along a strip at the side. To this slider is soldered a short piece of flexible wire, the other end being soldered to the 'phone connector under earth terminal. The end of detector at slider side is connected to the near end of the coil and to the aerial terminal. The other end of the detector connects to the phone clip by

a wire running through the centre of the coil, marked A at each end.

To allow of the detector being removed, the hole in strip at end (B) next to slider must be large enough to allow the detector to pass through when the

slider strip is removed. The wire to be used is 24's enamelled, and no other size should be substituted, as this has been worked out to give the necessary wave-length in the small the necessary wave-length in the small space available. If thicker wire is used, 2YA may not tune in, and thinner wire will increase resistance. The re-reiver will be described and illustrated

This is a handy portable crystal receiver specially designed by "Megohim" such winding will occupy a length of the give as much efficiency as possible in small compass, and yet be suitable. This is for aerials not less than about the compass of t 65 feet total length, but for short aerials 30 feet or more, close-up winding should be adopted, in which case about 170 turns can be got in.

In order to facilitate space winding, a scale with 106 spaces is provided. This scale should be cut out, split down the centre line to make two scales, and one glued along the slider track and the other on sloping top of other side piece, near outside edge. These will form a good guide in winding the wire with correct spacing. It is easier to wind in the spaces, and not on the lines. Winding must be very tight for a neat coil, and to prevent the side strips bending a small crosspiece is strips bending, a small crosspiece is inserted as shown, flat way on, and may be a tight fit and only glued at the ends. When the wire is all wound on, it is secured by liberal application of thin celluloid cement along the four narrow edges left at outside of side

To fit the crystal in the easiest way into its place, one side-strip should be screwed to one end-piece and the other side to the other, end, and when the detector is suitably placed and the brass angle-piece fixed, the frame is screwed together. Aerial and earth terminals should be put into the ends before attaching to sides. The piece on which slider works is put on last, and cut to fit the full length of the frame. Before the wire is wound on, everything but the slider must be in position, including the wire from aerial terminal through side piece, to solder with beginning of coil to brass plate holding end of detector.

BRASS FITTINGS.

The angle-piece to hold the perman. ent detector is 22's brass 1\(\frac{1}{4}\) inches long and \(\frac{1}{4}\) inch wide. Near one end a three-eighths inch hole is drilled, and two one-eighth inch holes at the edges as as for winding with spacing between shown, for No. 4 4 inch brass screws.

This plate is bent at right-angles so that the centre line of the detector is not more than five-eighths from the end piece. This can now be used to find position of holes in side pieces, which may need enlarging with a sharp

knife.

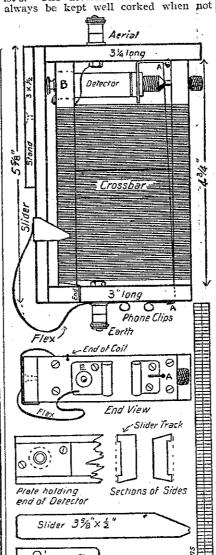

The brass plate holding small end of detector is 1½ by width of groove, drilled to hold detector screw, and for two 1 inch screws at ends.

WINDING THE COIL.

Begin winding the coil at B, where it passes through a hole and is soldered to the brass plate, to which the aerial terminal is also connected.. The finishing end of the coil is not a connecthrough a hole in end piece near earth

The 'phone clips are made by curling a piece of thin brass round a nail as spindle \(\frac{1}{3} \) inch in diameter or slightly larger.

Celluloid cement is made by dissolving chips of celluloid in sixpennyworth of liquid acctone obtained at the chem-The acetone and cement must

in use. The cement sets in two or thours. After it has been applied to the wires, any spacing that does not look correct can be put right before setting takes place.

In use the piece marked "Stand" turns on the central screw and forms a cross-piece upon which the set stands securely, with the crystal knob at the top, which is protected for carrying by the projection of end piece.

For carrying, a piece of cardboard could be made to fold round, and the whole wrapped in paper, but some constructors may prefer to make a special

cardboard box for the purpose.

The approximate cost of materials

Crystal detector, 1s. 6d. to 7s. 6d. ilb. 24's enamelled wire l doz. ¼ inch brass screws 1 doz. ¼ No. 4 brass screws Sheet brass

The carborundum detector costs 7s. 6d. but is very suitable, as it will fix by one end only, and does not need any adjusting—is always ready. The semi-permanent type illustrated costs about 3s. 6d., and being the most dif-ficult to fix, was used to describe. Cheaper and smaller semi-permanent can be obtained for less than the amount mentioned.

ANSWERS TO CORRESPONDENTS BY MEGOHM APPEARS ON PAGE 15.]

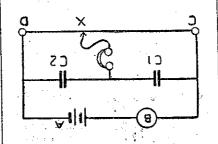

WRNY, New York, conducted some unusual, yet interesting, experiments recently when listeners were enabled to hear the noises made by dry ginger ale, writing a letter, goldfish swimming in an aquarium by means of a special amplificat.

MEASURING THE CAPACITY OF FIXED CONDENSERS

A SIMPLE METHOD

fairly accurate idea of the capacity of a fixed condenser within about five per cent, of the total. The system is best adapted to condensers larger than 0.0005 m.f.d. As standards to work by, the average amateur will find a .001 and a .0005 of good make sufficient for his purpose.

The diagram shows the hook-up, B is a buzzer of some kind, A the battery to supply current, CD is a yard or a metre of bare resistance wire stretched alongside a measure of the same length. C1 is the standard condenser and C2 the condenser to be tested. Connected

between these is one side of a pair of phones, the other side X being slid along the resistance wire when testing. The buzzer circuit is through the resistance wire, so the latter must be thick enough to allow a workable cur-

This is a method of obtaining a rent to pass, so a gange from 26 to airly accurate idea of the capacity of 50's s.w.g. will serve. The buzzer fixed condenser within about five per should be placed so that its sound does not interfere with that heard in the 'phones,

In operation, with the buzzer working, the 'phone tip is slid backwards and forwards until the point X is found where the buzzer note is faintest or practically disappears. This can generally be located within half an inch. When this has been done, measure the two distances EX and DX, then the capacity of C2 is capacity of C1 multiplied by EX and divided by DX.

This method has been tested and found resful but unturally depends to

found useful, but naturally depends to some extent upon the way the circuit laid out and the care with which

the testing is done.

To test the accuracy of your circuit, place the .001 on one side and the .0005 on the other side, and see how near the trial calculates out. Then reverse positions and test again.

Intending constructors of the B eliminator need have no fear that it will happen anything as mentioned in a paragraph in "News and Notes" last week. In designing this eliminator "Megolini" aimed at efficiency and allowed very liberal margin everywhere, consciolly in the choke coil. The only lowed very liberal margin everywhere, especially in the choke coil. The only heating the transformer gets is from the heat caused by the rectifying valve, and with P.M 4's this is almost nil. The B. H. Raytheon tube runs hotter, but the partition keeps most of the heat from the transformer.

CHESS" BY RADIO

A NOVELTY AT 1YA

During the entertainment sessions beginning December 20 and ending December 24, a novelty "stunt" in the form of a chess game will be played between station 1YA and

The procedure will be as follows: At 8 p.m. on Tuesday, December 20, 1YA will broadcast the first move of the game. The first opposing move then received per telephone from lis-teners will be accepted, and at the first opportunity or break in the entertainment programme the listener's move and the station's counter-move will be broadcast.

Thereafter the game will be continued throughout the evening sessions dur-ing the week until the game is con-

For the benefit of those listeners who have not followed the game with certainty, or who have not correctly re ceived the moves, the positions on the board will be described at intervals

It is believed that this is the first occasion on which a chess game has been played "on the air," and as there are a great number of chess enthusiasts among listeners, it is expected that the innovation will appeal, not only as a game, but as a distinct novelty.

Programme Features Continued

(Continued from Page 7.)

Friday night, dance music will be played from the studio.

Miss Belle Renaut, contraito, and Miss Frances Hamerton, soprano, of the Melodious Four, will be singing some popular songs on Friday evening. The bass soloist of the quartet, Mr. T. D. Williams, has chosen two fine songs for that evening. They are "Captain Mac" and "Charming Chloe." Mr. Wiliams will also be singing in a trio and in a quartet. His confrere, Mr. Russell Sunner, will also be heard in solos, duet, trio, and quartet.

NEXT WEEK'S PROGRAMME.

Featured in this week's programme will be the bright C Minor Trio of Mendelssohn, movements of which will be played each evening. Menhelssohn wrote two trios, and this is the companion to the one in D the companion to the one in D Minor, which was so well received when played by the trio recently

The whole trio is typical of Mendelssohn's mastery of form and heauty of melodic thought. The Scherzo becomes a favourite at first hearing, on account of its captivating gracefulness.

The Hungarian Dances of Brohm have found such favour with numbers of listeners that another one is to be performed. In these dances the composer has penetrated deeply into the Hungarian spirit, and has caught the colour, swing, perfume, melancholy, and reckless joy of these traditional meladica melodies.

Interspersed between vocal items on from Reissiger's E Flat Trio, which is noteworthy for its brightness, will be performed. Also on the same evening another movement from the Trio in F of Godard will be rendered, besides lighter numbers, such as the beautiful "Song of the Mountains," by the Norwegian composer Greig; Offenbach's "Boat Song," and the popular "Souvenir de Sorrento," by

Severine.
On Thursday Schubert's much-loved "Cradle Song" will be played.
Mr. Harold Beck will be heard in his own arrangement of Rubinstein's famous "Melody," and a sparkling dance by Rossini.

ORCHESTRAL ATTRACTION AT 3YA.

UNDER THE CONDUCTORSHIP OF MR. HAROLD BECK.

special feature on Wednesday evening, December 2I, will be the work of the string orchestra conducted by Mr. Harold Beck. The orchestra possesses a fine record of artistic achievement on the concert platform. Not only are the players in number a considerable body, but a body quite com-petent for their exacting task. The leader of the orchestra is Miss Irene Morris, who is acknowledged as one of the foremost orchestral leaders in the Dominion, having held positions with many musical organisations

The orchestra is unique in that its members are all players of string instruments—violins, violas, 'cellos, and double-basses. It does not, however, confine itself to this combination, for when occasion demands, wood-wind,

brass, harp, and drums are added when musical compositions requiring these instruments are performed. The inherent beauty of the string orchestra is that it is not a diminutive, but perfect in itself and owning to no outside influence.

Among the competitions to be played on Wednesday will be the "St. Paul's Suite for String Orchestra," also the ever pepular "Andantino," by Lemare. An exceedingly vivacious and exhilar-ating number will be found in Fould's "A Fiddler's Fancy," taken from a suite entitled "Music Pictures." It also has the sub-title of "After Mor-land," and those who have seen the paintings or engravings of the famous Morland, with its rural scenes of barns, cattle, domestic pets, will ap-preciate the idea conveyed. It is written in the form of a country dance, and one can imagine the real old country fiddler "hard at it."

Another attractive suite is called "The Gressenhall," by Cunningham Woods. The four movements are named respectively: "Preamble," "Norfolk Folk Tune," "Slow Air," and "Jig."

BROADCASTING RACES

THE TOTALISATOR FACTS.

The suggestion has been made that the refusal of one or two clubs to allow their races to be broadcast was actuated by the fear that the totalisa-tor receipts would thereby be adversely

Examination of the actual figures over the period June to December show there is no warrant for such a belief. The facts are that the totalisator figures of thirteen race meetings that were broadcast increased over the previous year's figures by a total of £32,532 on a turnover of £1,412,058,

ALL-AMERICAN

Constant-B

SHORT-WAVE RECEPTION

HOLLAND INCREASING TRANS-MISSIONS.

MR. SELLENS' REPORT.

Since my last report, I received a letter from Philips Radio, Holland. They state that they are removing their short-wave transmitter from Eindhoven short-wave transmitter from Enddhoven to Hilversum; when this is completed they hope to increase the number of their transmissions. The hours and wave-lengths, they say, will be stated before the microphone. Their address for reports remains: The short-wave transmitter of Philips Radio Labora-

This station has been off the air for about five weeks, so, if the installation is completed in estimated time they should be heard again in about one week's time.

On Saturday afternoon KDKA was eard, but very weak. 2XG, Rocky heard, but very weak. 2KG, Rocky Point, New York, was testing. The only times I have heard this station they have been testing. PCLL, Dutch Telegraph Co. Station. The Hague, Holland, were heard from 10 50 p.m. till 11.45 p.m., when their transmission

while the returns of fifteen clubs that were not broadcast showed a decrease of £50,398 on a turnover of £540,488. On the face of things, therefore, it would seem that the broadcasting of a meeting acts as so effective an advertiser as to attract bigger attendretriser as to attract bigger attendances and more liberal patronage of the machine. Meetings not broadcast declined 10 per ment in turnover, while those that were broadcast saved that drop, and actually increased 2½ per cent. on the previous seasons

concluded with the Dutch National Anthem. This was sung by a man and woman with organ accompaniment.

kiloizeles (18.72 metres I make this to be). I understood the announcer to say that they are on the air each Wednesday from 14 to 16 G.M.T.; this equals 2.30 till 4,30 a.m. Thursday morning New Zealand summer time—not a con-venient time for New Zealand listeners. KDKA and 2XAF were both weak on Sunday afternoon. A voice was heard on about 33 metres at the time Mr. Marcuse is testing. This was too weak to hear a word that was said. 2AT was heard at good strength in the evening, but modulation could be better. RFN started at 9,30 instead of 10.30 p.m. as usual. This was the only station heard on Monday evening, static being too bad to do any listening.

As an indication of the strength of RFN, it was clearly audible on the speaker using a 7/20 wire about 18ft. long across the room as an aerial (this I use as a counterpoise for short-wave reception). The station could be heard quite well on the 'phones with neither earth or acrial.

On Wednesday from 6.15 a.m. till 7.15 a.m. ANE Java was heard at won-derful volume—almost as loud as 2YA with a crystal and one of audio. Modulation could be improved, but speech was clear enough to understand every word when English was spoken. Holland was called at one time. Later India, Europe, and America were called and he announced that this is the shortwave transmitter of the Radio Labora. tory Service, Bandoeng, Java, Dutch East Indies, on 31.86 metres, asking for reports to be sent to this address. During the evening 4AE, Gore, 2HH Strafffeld, N.S.W., and 6AG, Perth, were

Eliminate Your "B" Battery Troubles with the

DEMAND EXCEEDS SUPPLY

Battery Eliminator CONSTANT "B" BATTERY ELIMINATORS have proved easily the best power units yet brought into this country, and the demand has always exceeded the supply.

2 (2) (2) (2) (3) (4)

CONSTANT "B" BATTERY ELIMINATOR complete with Raytheon Tube £10-10 Their remarkable feature is that comparative tests prove that the "CONSTANT 'B'" causes any receiver to deliver GREATLY-INCREASED POWER; in fact, it is safe to say that, compared with any other well-known eliminators or ordinary "B" Batteries the CONSTANT "B" is EQUAL TO AN ADDITIONAL STAGE OF AMPLIFICATION.

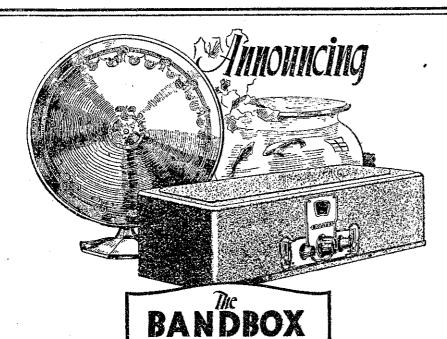

A well-known radio technician reports that this is as true

on short-waves as on broadcast-wave receivers. The wide range of available voltages on the taps provided, together with the Hi-lo switch, adapts this Eliminator to almost any make of the Hi-io switch, adapts this Emminator to almost any make of receiving set from 1 to 10 valves. On the low side of switch it will satisfactorily supply current for sets requiring up to 25 135 volts, of 35 mils at 180 volts. There is nomils.at. fi60 up to 60 mils at 135 volts, or 35 mils at 180 volts. There is no hum, ripple or other extraneous noise with a "CONSTANT 'B'."

OUTSTANDING QUARTETTES AND TRIOS.

Important engagements of outstanding professional talent have been concluded for 1YA, Auckland, by Mr. W. J. Bellingham, musical director.

The engagements include two distinguished quartettes, an instrumental trio, and a station pianist, all of leading talent. The personnel engaged are:

dition to those named, Miss Chrissie Ormiston and Mr.

(1) Mina Caldow-Barry Coney Quartette, including, in ad-

O'Malley.
(2) The Towsey-Sutherland Quartette, comprising Mrs. C. Towsey, Miss Lola Solomon, Mr. Simpson and Mr. Frank Sutherland.

(3) Instrumental Trio-Miss Ina Bosworth, Miss Lalla

Hemus, and Mr. Cyril Towsey.

(4) Station planist—Mr. Cyril Towsey.

In addition, Mr. J. F. Montague, well-known elecutionist and judge, has been engaged for regular performances. Details of the careers of these artists will appear next week.

Through pressure on space our Mailbag and other matter has unavoidably been held over.-Ed.

A 1YA COMPLAINT

"THE MESSIAH" RELAY

The Radio Broadcasting Company of New Zealand has been unjustly taken to task in a section of the Auck-land Press for not undertaking to relay the second night's "Messiah" concert by the Auckland Choral So-

ciety on December 17.

The company, however, was faced with a difficulty which, through the terms laid down by the Choral Society, rendered it impossible to undertake, without the risk of disappointing the listeners. The Choral Soing the listeners. The Choral So-ciety offered to permit the Broadcast-ing Company to relay the second night's performance, providing that the takings on the first night of the oratorio reached £250. The Broad-casting Company's programmes must be compiled four weeks ahead for Press publisher purposes publicity purposes,

but, in accordance with the Choral Society's conditions, it would not be possible to know, until the night before the proposed relay, whether it would take place.

If the company had gambled on the prospects, and had announced that the relay would take place, widespread complaint and criticism would have resulted had it been found impossible to put on the relay. Individual concert performers, to fill the gap, could not be found at such brief notice, and artists will not accept en-Individual gagements contingent upon a relay not being available.

ANSWERS TO CORRESPON-DENTS

(By "Megohm,")

BROWNING-DRAKE.

R.T. (Hawke's Bay) has an American factory-built B.D., 5 valves, resistance-coupled audio. Reception is very weak and lacks quality. Replace the P.M. 6 with a P.M. 256. One or more of the resistances may be faulty, so procure a new one of the same kind and try it in place of each one in turn. If still un-

satisfactory, write again.
G.H.B. (Christchurch): If your factory-made B.D. blasts on heavy volume, it could be improved by placing a valve of lower impedance than the present 6000 ohms in the last audio. you contemplate adding a Ferranti transformer, you will only require one, an A.F. 3, and this must be put in place of the second one. The output filter can be procured as a complete unit for connecton outside the set, and will reduce overloading of the speaker and thus allow of more volume. Your aerial is quite suitable, but your set is

rather unselective, even though only three miles from 3YA. Advice given through this column is free, but limited

to a reasonable amount.

J.N. (N. Wairoa): The pyrex insulators alone should be quite efficient, and would not cause the rushing sound which you experience every evening from 7.45. The trouble is probably caused by general radiation from neighborsing receivers bouring receivers.

CRYSTAL QUERIES.

Polar (Manawatu) is 90 miles from 2YA, gets good results on two-valve set, but fails to get 2YA on "Record" crystal set with carborumdum. Look the set over carefully—see that all joints are good—it is easy to leave a fine streak of enamel on the end of wire

that when clamped under a nut will

with trainped finder a fift wing give complete insulation.

W.R. (Eastbourne): A two-valve amplifier for crystal appears in this page in "Record" for December 2, and a one-valve amplifier appears on August 96.

C.M. (Clevedon): I do not know that the new crystal is yet stocked in New Zealand. If the galena crystal is played out, scrape the top surface away liberally, and you will probably get better results. Some of that type of crystal are not as good as they should be. From your description it is diffi-cult to tell what is wrong with your phones. Perhaps the diaphragms are phones. Fermaps the magnets, which would necessitate either turning the diaphragus or adding a ring of thin paper to increase the distance.

The "Record" Short-Wave Receiver Set

Full Shielding Recommended and Described

(By "Megohm.")

Below is given the second instalment of "Megohm's" comprehensive article upon the manufacture of a compact and efficient, fully-shielded, three-valve short wave receiving set. This set was on exhibition in a Willis Street shop for several days last week and was closely examined by a number of radio enthusiasts, who expressed admiration for the lay-out and workmanship of the For the benefit of distant enthusiasts we give below in addition to further diagrams photographs of the interior and panel board of the set.

HIS is the second instal-ment of the short-wave receiver description. The full shielding of the set with copper sheet is described, so that those who

ish to make the outfit complete may so, and it is left to constructors to determine whether they will discard any or all of the shielding. But we recommend those who construct the full set to shield the receiver itself fully, as a considerable amount of static and interference, including A.C. hum, is thereby cut out. The shielding also makes oscillation easier, and smoothes out or reduces the tendency to blind spots at certain positions. Where there is liability to special kinds of inter-ference, it will certainly pay to shield the batteries and leads as well. In the case of the converter only, the front panel should be of metal to cut out any chance of hand-capacity, and full shield-ing of the detector unit would in this case also be an advantage, carried out

.00025 as a last resort.

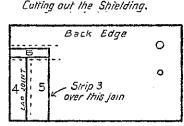

The reaction condenser is a .00025 of low-loss, centre-line type, with not less than 10-1 vernier.

Both tuning condensers are set back from the panel to keep clear of shield capacity, and in order to allow of this, the spindles have to be lengthened by means of a brass collar, or connector, with set-screws, which hold a short piece 1 inch brass rod extension. This also necessitates a separate support for also necessitates a separate support for the condensers, so each is provided with a small upright panel of ebonite 4 inches high, and two inches or more in width, to suit the holding screws of and about 8in long must be provided. Condenser. This ebonite is screwed This may be of cardboard, cut along its to a small piece of wood, which is in turn screwed to the baseboard as shown in a diagram. The position for these is found after the extension spindle and vernier dial are in place.

Several times been described, but for the benefit of new readers a brief description will be given.

A collapsible former 3in, in diameter that about 8in long must be provided. This may be of cardboard, cut along its supporting from inside whilst winding. Six strips of motor hood-light celluloid are cut in wide and the length of the former. Three strips are spaced out and tide to the former at each end with

exactly as for the full set, with the

Low-Loss Radio Choke

Winding Three Secondaries on one Former

reduced width.

The Hammarlund condenser specified for tuning the secondary coil is of .0001 capacity, the plates being double-spaced specially for use in short-wave reception. The object of using a condenser of such small capacity is to provide easy tuning, and to those especially who are new to chort wave real. who are new to short-wave work this is a great advantage. This small capacity makes the use of interchangeable coils necessary, but as two of these cover the wave-lengths most used, and there is only one piece to be plugged in, the operation of changing is very easy, especially as the shield is de-signed to tilt up conveniently for coil-changing. Some constructors will persigned to tilt up conveniently for coil- proximate, because differences in re-changing. Some constructors will per-ceivers or tuning arrangements will af-haps be unable to obtain the .0001 con- feet the exact wave-length covered by

THE TUNING COILS.

There are four secondary coils, each accompanied by its own suitable tickler permanently attached. The set or coils covers a wave-length range from 15 to 110 metres, with a reasonable amount of overlap between each, as follows:—Secondary Tickler Range in

		realities III
turus.	turns.	metres.
20	7	65 - 110
11	5	4565
· 6	5	3045
3	4	15-30
C		1

These figures must be taken as ap

denser, or even a slightly larger one, coils. If a larger capacity secondary strips in thick, with a short diagonal but a substitute can be made by removing all but three moving plates of a wider range. By providing coils with underside of the bottom shield by a suitable number of turns, ordinary broadcast wave-lengths can be efficiently received.

> The secondary coils are made from 18's tinued copper wire held together by celluloid strips both inside and out-side in three places. One of these cel-luloid supports is long enough to run back and fix under the first pin of the group of three in the mount. The method of making low-loss coils has several times been described, but for

> are cut sin, wide and the length of the former. Three strips are spaced out and tied to the former at each end with twine. The end of the tinned wire is then passed through a hole in end of former, three turns wound over cellu-loid, with space between each turn equal to thickness of wire, then the next turn runs diagonally to leave a space of fully 2 inches, and the six-turn coil is then wound. Then leave a space of about 2 inches and wind eleven turns. Then celluloid cement is liberally applied to the wires where they cross the celluloid strips, and for a distance each side. Another strip of celluloid is pressed on top of each, and put aside for at least two hours to set, after which the former may be carefully taken out and the celluloid strips cut to the desired lengths, leaving one long end on each coil for bolting down. The 20-turn coil is subsequently wound in

> the same way.
>
> Tickler coils are made of 24's (not 22's) enamelled wire wound close together and secured with celluloid. The former should be of 2\frac{3}{4}in. diameter. These coils are secured by sticking two of their celluloid supports inside the two upper supports of the secondary, with the coil rather less than in from the first turn of secondary. Allow three inches of wire on each end of ticklers for connecting to soldering tags on

THE R. F. CHOKE COIL.

Many forms of radio choke have been tried, and the one found to be best is a properly-constructed low-loss coil of 100 turns made on the same principle as the Browning-Drake tuning coils. The choke is only sin diameter, and the 100 turns of 80's enamelled wire occupy about 3\(\frac{3}{2}\)in. in length, which means about 26 turns to the inch. The former is made from a six-inch length of round stick about \(\frac{3}{2}\)in. diameter, sawn down the centre lengthways, the thickness of saw-cut being made up with one or two narrow strips of cardboard longer than the stick, so that they can be pulled out to loosen the former. A single layer of thin paper is to be put round the former before winding, sticking as little as possible anywhere. Cel-luloid strips 3-16in, wide are applied at opposite sides both inside and out-side the wires. The strips are left an inch long at the lower end of the coil, and these ends may be glued to a cork which is in turn glued to the board. Any constructor who wishes to make a choke more easily may wind it on a in. test-tube, but of course the presence of the glass dielectic detracts from its

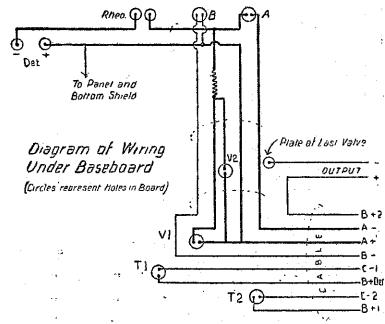

WOODWORK.

The baseboard is \$in. rimu, 20 11½ inches, battened underneath in three places with inch strips of the same thickness. The frame to hold the panel is also constructed of one-inch at the back, the other at the front; raising the set to allow the battery cable and 'phone leads to come away to the right through holes in the bottom sbiela.

The exact method of attaching phones or speaker is left to the individual to suit requirements. Some dividual to suit requirements. may prefer to fit a jack, others to lead the 'phone cords in and attach in-side, or to attach to the output wires

Every piece is clearly shown in the diagram, but the bottom piece needs a little explanation. In order to get this out, pieces 4 and 5 will be found to nearly fill the missing corner. Pa.t of piece 6 is then soldered over the remaining gaps, and other narrow strips remaining are used to cover any re-maining join. Of course, if the copper is bought in a different size of sheet, this joining may not be necessary. Strips 1 and 2 of the cover are turn-

ed in to add stiffness, but must not be allowed to add much thickness, as these edges have to go inside the turned-back sides of the front panel. The top

Shellac varnish makes a suitable fiuish for the woodwork.

GENERAL DETAILS.

The brake for the aerial coil is made from two strips of 18's hard brass, 2' by 8.8 inches, bent as shown, drilled one end to screw to baseboard, and drilled near grip to take tighten-ing bolt. A small piece of felt is placed between grip and spindle, and, with proper adjustment, very smooth action is obtained.

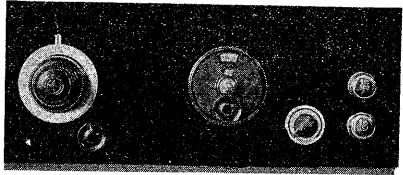

The aerial coil spindle is kept from having end-play by a metal pin put through it on each side of the back bearing, but as the scraping of metal

front edge of cover is turned back inside, but the edge of this should form a one-eighth inch tube in order to add A thick wire can be put in

the fold.

The front panel is turned up one inch all round. This should be done after the woodwork, with the 3-ply panel in place. The copper panel then fits over this close at top, and under battens at bottom. At the sides the inch turned back stands one-eighth inch away from the upright to allow the sides of cover to drop inside.

The turned-up back edge of bottom slopes back at 45 degrees to allow the cover to tilt back for coil-changing,

Panel of Short-wave Set.

carried out with 14's bare copper wire, and in sight on the audio side, with bare 18's tinned, whilst all under-base wiring is done with 20's bell wire of good quality.

WIRING-UP DIAGRAM.

All wiring above the board is easily seen from the plan, but for the underneath wiring a special diagram is given. A full set of varying B and C voltages is provided for, and any not required may be cut out. It should be noted that all under-base wires are to be run parallel as much as possible, and, where convenient, may be bound together with thin twine. Dotted lines indicate how the wires are ted lines indicate how the wires are to be bundled together. All wires that run from any point in the set to a battery are to be of 20's bell wire, and must be cut a suitable length to run without join from the point to the battery. The circles on this diathe battery. The circles on this diagram represent a hole in the board, through most of which two wires pass to the upper side. The panel and bottom shield are to be connected to each other, and at a convenient point to a positive

to A positive.

A fixed resistance is shown, instead of a rheostat, to regulate amplifier filament voltage.

THE SHIELDING CABINET.

The copper shielding really forms an easy method of making a neat cabinet for the set, as it is easier to make a metal case of smart appearance than one of wood. With the black cycle enamel finish on panel and shield the appearance leaves little to be desired.

The copper sheet used is in pieces four feet by two feet, tinned on one side, in which case the tinning is used as the inside, on which no enamel is placed. The cutting out of the various parts from the one sheet must be done exactly as shown in the diagram, which leaves about sufficient copper left over to mint a farthing.

against metal must be avoided in a short-wave set, a thin celluloid washer must be slipped over the spindle on each side of the bearing, and against these the pins will work.

All connections on the R.F. side are carried out with 14's bare copper wire faure of panel.

flange of panel.

The top and sides of the cover are in one piece. The back has a half inch turned at right-angles on three sides, and these are soldered in to form the back of cover. The Lottom edge of the back is turned in flat to add stiffness.

All flanges and turned edges are half inch except on panel (1 inch), and the two sides of bottom, which are fiveeighths inch.

The hole in bottom for cable must be clear of the inch strip of wedd

screwed underneath at back edge.

Next week the question of valves will be dealt with, and the wiring diagram and instructions for the converter

will be given. On receipt of stamped addressed envelope with query, "Megohin" will supply the address of a firm making

the condenser connectors.

Constructors are reminded that B eliminators cannot be used for shortwave, and that a B battery must be provided.
