The N.Z. RADIO LISTENERS' GUIDE will put you right. 160 pages packed with valuable matter, numerous illustrations, written and produced in New Zealand, and dealing with New Zealand conditions, it provides a material help in the full understanding of the Why of Wireless.

This useful book is invaluable to listeners and prospective listeners. It fills a long-felt want, and provides in compact form information regularly sought by listeners and prospective buyers of sets.

The co-operation of the Radio Trade has helped to make the Radio Listeners' Guide as full as simple, and as reliable as possible. Easily understood, comprehensive and authentic, it is in truth the radio listener's GUIDE.

This souvenir issue commemorates the anniversary of the "Radio Record," and tells the story of radio achievement in New Zealand—a story of steady progress. The possibilities of the future are great, and it will be the constant aim of this paper to keep its readers abreast of the times and fully conversant with all questions relating to the widening activities of our broadcast service. Our constructional section, which has earned the praise of hundreds of our subscribers, will keep readers in touch with the latest innovations in radio, while the inclusion of articles by other experts will show where New Zealand stands in the radio world.

When you have finished with this copy, pass it on to a friend and interest him in radio. The more listeners there are, the better the service, so in helping others you will assist yourself also.
