

DON'T YOU THINK YOUR RADIO SET COULD BE IMPROVED ?

IF Philips "Miniwatts" are NOT in every socket of your receiver, then certainly there is ample room for improvement.

It is only when you take a full set of these mighty valves home, and place them in your receiver, that you realise that they are **DIFFERENT**.

See that you are using the **CORRECT TYPES** by either writing to us, or asking a **GOOD dealer**.

Whatever you do, see that you get a copy of our attractive and informative valve folder
