

OUTSIDE the House of Representatives, many a politician will promise heaven, and point to the colour of his eyes as a guarantee of delivery.

There are valves like that. They promise wonderful things because of this, that or the other special feature.

But you can't fool the electrons. They either go through good and strong or they don't. The Loud Speaker will tell you.

And that is where the Marconi Valve shines. EVERY part of it is designed to work. As a result the Marconi Valve is a perfect valve. No more—and, very certainly, no less.

You have a 2-volt accumulator,—then these are the Marconi Valves you need:

MARCONI D.E.H. 210—
for the H.F. stage.

MARCONI D.E.L. 210—
for the detector stage
(also for general purposes.)

MARCONI D.E.P. 215—
for the power stage.
