# There's a CROSLEY for every Purse and Purpose

## THE SHOWBOX

Simplicity of design is the keynote of the Showbox. A completely shielded genuine neutrodyne (patented) Receiver, with three stages of radio frequency amplification, detector, and using the famous "push-pull" hook-up which produces immense volume without distortion. The Showbox utilizes full 180 volts on the plates of the output valves, and is by all odds one of the most finely made and efficient A-C Sets ever offered to the Radio public. With the Crosley Dynacone (Dynamic) the Showbox is a revelation in fidelity of reproduction, as is known to-day, only where most expensive Sets are operated. It operates from the house current. Its handsome gold highlight, ripple-finish metal cabinet will be appreciated by all lovers of the artistic.

The SHOWBOX No. 706  
8-Valve A-C Electric.

The GEMBOX No. 608  
6-Valve A-C Electric.  
Price complete with  
valves and speaker  
from £35.

## THE GEMBOX

For simplicity of operation and low cost in running, the Gembox stands supreme. Cheaper to run than an ordinary electric house lamp. No batteries to charge or replace. Simply plug into the light socket, and yet—despite its utter simplicity, beauty of design and solid construction, it is carefully manufactured and critically and painstakingly inspected. But the Gembox must be heard to be appreciated. The Gembox is a 6-valve genuine neutrodyne (patented) Receiver with regenerative detector and incorporating the famous 171A Type Power Valve in the output stage. It also uses the U.X. 280 Type Rectifier Valve making a total of 6 valves, all housed inside its beautiful gold highlight ripple-finished cabinet.

*Important New Exclusive "CROSLEY" Feature.*

### Self-healing MERSHON (Electrolytic) CONDENSER

No paper condenser to blow out in Crosley electrics. Even the Gembox, despite its low price, uses the famous Mershon Self-Healing (Electrolytic) Condenser, which eliminates the difficulties experienced with the majority of electric sets. Condenser trouble is practically the only trouble to which electric sets are subject. The inclusion of Mershon Condensers also makes for far smoother reception and elimination of A-C hum.

With a "Crosley" you are assured of complete and lasting satisfaction. To hear it is to want it . . . . Let your own ears tell you! You know what you like! You know good radio reproduction! Send now, for the name of your nearest Crosley dealer to:—
