

Announcing The "COURIER THREE"

The New "6 Point" Set !

The knowledge derived from years spent in the study of local conditions—backed by the resources of a 67-year-old Corporation—has produced a NEW Radio Set for you—a Set that presents many entirely new features, and is altogether unrivalled in every way—it is called the "Courier Three."

Because of these Reasons we call it the New "6-Point" Radio Set

(Front view of the "Courier Three.")

POINT

1 Power—

On this point the "Courier Three" stands supreme. The special circuit employed, assisted by the combination long and short-wave attachment, enables a range of distant stations to be logged that is almost double in number to that of any similar Set. And the one-dial control makes tuning so simple that a child can operate the Set.

POINT

2 No Local Interference—

Unlike the majority of 8-valve Sets on the market to-day the "Courier Three" suffers no interference from local broadcasters while tuned to receive more distant stations. Australian broadcasting is easily tuned in to perfect clarity while local stations are running on full power—yet there is no wave-trap to complicate the tuning.

The case is constructed of metal throughout with a duco bronze finish, which gives the Set a very handsome appearance, and adds to its Radio efficiency.

POINT

3 Long or Shortwave Stations—

Shortwave stations such as Eindhoven, Holland, Schenectady, U.S.A., Surrey, England, etc., are within easy reach of the "Courier Three." To change the Set from long to shortwave reception, the operator simply plugs in the aerial jack to a special socket and switches over the Hi and Lo Switch. What could be more simple?

POINT

4 Enjoy Gramophone Amplification—

A special plug is provided outside for gramophone "pick-up," enabling a record to be played on any gramophone, and the sounds passed through the Set to issue from the loudspeaker with a richness, clarity, and when required, volume, that is seldom achieved by a gramophone. Thus, with a cheap portable gramophone, a "pick-up" and the "Courier

Three" you also have a record-playing instrument that is considerably superior to the average gramophone.

POINT

5 Your Voice Amplified—

By inserting a pair of phones into the "pick-up" socket in the back, and speaking into the phones, the operator's voice will be amplified through the loudspeaker. This arrangement can be used to advantage (and will cause much fun) at children's parties, dances, etc.

POINT

6 Portability—

The "Courier Three" is practically self-contained and portable—the "B" Batteries fitting into a special compartment in the base of the Set. Disconnect the aerial and the "A" Batteries, and your Set is ready to carry away.

The Set is complete with Phillips Valves. Orphean Speaker, Phones, L.B.C. 4-volt Accumulator, 2 45-volt Burgess "B" Batteries, 4 1/2-volt Burgess "C" Battery, 100-feet 7/22 Aerial Wire, 12-feet Earth Wire, Six Insulators, 2 Inlead Tubes, Lightning Arrestor and Instruction Book—
Total Price, £27/10/-. Set and Valves only, £14/18/-.
