

SELECT the Programme You Want to Hear

*whether high or
low wave*

with a

"COURIER"

All that could be required in selectivity, compactness, power, portability, and simplicity of operation is combined in these new Courier Sets. The Q.R.3 Model has several points of outstanding interest—we list them briefly, but suggest that you write for the leaflet giving full particulars, as this Set shows a number of almost unique features. There is no local interference. A flick of a switch gives high or low-wave reception. A special plug for gramophone amplification. A device enabling voice amplification. Portability. A three-valve that is as powerful as the 4-valve Set of 1928.

A Valve Set for the price of a Crystal Set. You can listen-in to any station in New Zealand—and, with practice in tuning, Australian stations too—on this One-Valve Set. For the country dweller, who is debarred the use of a Crystal Set, and does not wish to make any great outlay for his Radio, this Set is just the thing. Cheap to buy, and cheap to run. Sold complete with accessories only.

Only best quality parts are used throughout this Set, which presents a very attractive appearance in its Brown Crocodile Leatherette Cabinet, measuring 10½ in. x 6 in. high. This Set will give Loud-speaker reception of Australian and New Zealand stations—performing with astounding efficiency when coupled to a good aerial. Battery consumption is reduced to a minimum, thus the cost of upkeep is next to nothing. Sold only with full accessories.
