April 12, 1929.

AIRZONE "THREE" ON DISTANCE.

(By "Observer.")

It has already been remarked that the Airzone "Three" is capable of handling very great volume without distortion, in fact it was found on test that it could operate a power valve of the 171 type. The main New Zealand and Australian Stations on a speaker have been claimed, and it was found by the writer to fulfil this claim. After the local station had closed down the following stations were brought in on the speaker at comfortable strength, that is, they could be enjoyed without straining: 1YA, 3YA, 2BL, 2FC, 3LO, 3AR, 4QG, 4YA could be heard. A special feature of the Set is its very smoothly operating controls.

*Two striking proofs of  
Airzone achievement!*

One from a delighted broadcast listener and the other from an expert technician with every convenience at home to make a thorough and searching test.

The Airzone comes to you ready to be connected to the batteries and aerial —no troublesome assembling or testing —Airzone is a perfect product, ready to give you long and faithful service.

The price is, with Valves (Philips) £12/3/6  
Complete with Philips Valves, Burgess Batteries and Loudspeaker . . £16/16/-
