

STILL Britain's Greatest Valve—

The

New**Mullard**

*P.M. Valves with the
Wonderful P.M. Filament*

—SCIENTIFICALLY CORRECT

Here's WHY

Because it has a long filament—nearly four inches long—held in two complete loops by resilient filament supports which keep it in permanent alignment. The long filament so held provides an unusually big radio-active area, so that it is capable of handling an unusually large amount of energy. Since the filament is completely enclosed by the plate, none of this energy can be wasted—consequently the efficiency of the valve is extremely high, resulting in Louder and Clearer Reception. Be fair to your set. Use only Mullards.

Two Valves in One

The Mullard Screen Grid Valve

Ask your local dealer about the wonderful Mullard Screened Grid Radio Valves. One of these new Mullard Valves does the work of two ordinary "distance" valves, and owing to the enormous amplification factor and complete stability it enables you to get all the distant stations, while tuning is greatly simplified. The Mullard Screened Grid Valves are the Radio Valves of the future that you can buy now!

30/- each.

In 2, 4 or 6 Volt. Types.

Mullard

All types procurable in UX and English Bases from all Radio Dealers.

The Mullard A.C. Valves have Arrived !

The New Mullard A.C. Valves maintain the reputation of the Mullard Valve, being scientifically designed—stronger in construction—clearer in tone—louder in volume. See that your All Electric Receiver is fitted with the following Valves:—

Mullard AC3 (UX226 Type)

For R.F. and L.F. amplification. Will give louder and clearer signal strength.

PRICE 15/-

Mullard AC4 (UX171A Type)

A Super-power Valve for last audio stages. Very suitable for Push Pull circuits where the constancy of the P.M. characteristics makes matching unnecessary.

PRICE 20/-

Mullard 102T (UX227 Type)

A special detector and amplifying valve. Very quiet in operation, and extremely sensitive.

PRICE 25/-

THE P.M. FILAMENT CUTS OUT THAT A.C. BACKGROUND.
