phean de Luxe Speaker £35  
With valves and "COUR-  
IER" Speaker ..... £39

## The Set that gets all Australian Stations without an aerial

Many radio sets will get nearby stations without an aerial. But the new "Courier" Electric Model, E.S., gets all the New Zealand and all the Australian stations without an aerial, and does it consistently!

### Super-Sensitive.

But its unequalled range is only the beginning of the advantages of this new "Courier." By an ingenious new arrangement the circuit combines an electric screened grid with a pentode valve. This makes the set so super-sensitive that one gets a first-class performance from weak signals.

### The Pentode Valve.

Moreover, the pentode valve gives a tone as clear as the ring of a silver bell. And it makes the circuit so compact and simple that this wonderful new "Courier" can be sold at a relatively low price. Its exceptional efficiency has been achieved by skilful design, making complicated parts and a multiplicity of valves unnecessary.

Of course, being electric, this new "Courier" dispenses with batteries. You just plug it straight into a light socket, or heating point. You should investigate this wonderful new "Courier" without delay. Send the coupon for free leaflet.
