

Radio Round the World

ANOTHER "dead spot" has been reported, this time in Egypt, by the pilot of an aeroplane flying between Cairo and Khartoum recently. The exact situation is above the Kings' Tombs, where the famous Tutankhamen's tomb is situated. Quite a number of these dead spots have been discovered recently, and it is

supposed that they are caused by electromagnetic spaces produced by electrified sand.

NO one has heard of Amos 'n' Andy for about a year or so; about two years ago they about summed up our impression of American broadcasting. It seems they are still on the air; on March 19 of this year they gave their 2286th episode, and celebrated their

eight year of broadcasting. Freeman F. Gosden and Charles J. Correll, they began as "Jim and Charley, two life-long buddies, from Dixie, have spent most of their life on a farm just outside of Atlanta . . ." (specimen from the introduction to their first broadcast), they soon changed to Amos 'n' Andy; and since then have run a fresh-air taxicab company, a realty business and a grocery store.

GOOD NEWS FOR HOUSEWIVES

THE NEW H.M.V.

Streamlined

ELECTRIC IRON

MADE BY

HIS MASTER'S VOICE

... A BRITISH PRODUCT

THIS new porcelain finished streamlined iron, makes ironing, QUICK, EASY and ENJOYABLE. Read the startling new features at right—then see it demonstrated, or send coupon for FREE illustrated literature.

- ★ THE HANDLE: There is no strain on hand or wrist even after long use. It is exceptionally light in operation.
- ★ THE THUMB RESTS: A shaped thumb-rest is fitted on either side of the iron so that it can be used without fatigue either with the right hand or with the left hand.
- ★ THE SOLE PLATE: Shaped to allow easy ironing between and under buttons, and to travel smoothly. The Plate is hot right to the outer edge.
- ★ THE IRONING SURFACE: This is heavily chromium-plated on hard metal. It cannot rust, tarnish, or discolour.
- ★ HEAT: You get it from four to six times as quickly as with an ordinary iron—and this heat remains constant.
- ★ THE REST: The H.M.V. Controlled-Heat Iron is designed so that it will stand safely when tilted back on its rest.
- ★ HEAT CONTROLLED KNOB: The degrees of heat is automatically controlled at the will of the user. A turn of the knob gives you exactly the temperature you require.
- ★ ELECTRICAL CONNECTION: The rubber cased cable gives complete protection and the longest possible life to the connections. No detachable connector.
