RCA RADIOLA 47

New Radiola—Gramophone Combination Instrument

In Radiola 47 RCA presents the complete modern instrument for home entertainment, reproducing both broadcast and recorded music. This superb instrument employs the sensational AC Screen-Grid Radiola, the famous RCA Dynamic Loudspeaker and a mechanism for reproducing recorded music, utilizing the loudspeaker and part of the Radiola circuit. An induction disc motor drives the record turntable, and an automatic stop operates at the end of the record. A tone arm and electric pickup of radically new design are employed. Space is conveniently provided for the filing of records. You can, by means of a

Air or Record*

convenient transfer switch, change from radio to record or vice versa without re-tuning set.

It must be conceded that the decision between broadcast and recorded music is often a difficult one. But with RCA Radiola 47—combination of the finest of radiolas with an electric gramophone of extraordinary powers—that decision resolves itself into a question of your mood and choice. You cannot ask anything in entertainment that this Radiola cannot give—instantly, and with a realism, beauty and power that will be an amazing and delightful revelation.
