

# BE YOUR OWN SERVICEMAN!

WHAT DO YOU KNOW ABOUT THESE?

WITH the popularity of radio reception, there has been a long felt need for a call book giving the wavelength and power of practically every major broadcast station that can be heard in New Zealand. With this end in view an additional section has been added to the "Guide," in which the name, wavelength, frequency and power of any transmission station may be found, classified into countries. It is simplicity itself, to check up on any call-sign.

IF IT HAS ANYTHING TO DO WITH RADIO, IT IS IN THE GUIDE.
