

PHILIPS

introduced the PENTHODE* VALVE 7 YEARS AGO

THE Penthode Valve is one of the greatest of recent radio inventions. It revolutionised receiver construction and set a new standard for quality radio reproduction.

The Penthode Valve was designed and developed during 1926/1927 in the large research laboratories of Philips Radio, and is a masterpiece of radio engineering.

Since its introduction, it has been enthusiastically welcomed everywhere. Its superiority was at once recognised, because it supplies a larger output at the same anode current energy and renders far more faithful reproduction of speech and music than any other valve. The Penthode has always been a feature of every Philips Radioplayer receiving set, and should be in all others. Buy Philips Penthodes and you'll be amazed at the improvement in power and quality.

PHILIPS ARE ALWAYS FIRST

* The word Penthode is derived from the Greek word 'penta' meaning 'five', and 'hodos' meaning 'way', so that a 'Penthode' Valve signifies a 'five-way' valve.

Advt. of Philips Lamps (N.Z.) Limited, P.O. Box 1673, Wellington.
