STEINBERGER™

STEINBERGER™

GL4T GUITAR WITH TRANSTREM™

In response to popular demand, Steinberger has added a new pickup configuration to its guitar line. Designated the GL4T, it features two single-coil EMG pickups in the neck and middle positions, and one humbucker by the bridge. Each pickup has its own ON/OFF push button, allowing for all possible combinations. A Master Volume and Master Tone make up the rest of the control system, with an active EQ available as an option.

The GL4T is equipped with Steinberger's unique TransTrem™ transposing tremolo, which keeps all the strings in tune with each other during tremolo action and allows the instrument to be locked into three lowered and two higher tunings. The new guitar shares the same specifications as the GL2T double humbucking and GL3T triple single-coil models: one-piece neck and body molded out of the exclusive Steinberger Blend™ composite material; headless design utilizing double-ball strings and 40:1 ratio rear tuners; 25 1/2" scale with 24 frets (22 clear of the body).

The GL4T comes in black or white and includes a heavy-duty black nylon gig bag, shoulder strap, and cord as standard accessories.

OTHER MODELS AVAILABLE:

**GL4S (STANDARD TREM)
GP4T (BOLT ON NECK)
XL2 BASS (ALL GRAPHITE)
XP2 BASS (BOLT ON NECK)**

Also available:
● 5 string bass
